Combination Louver/Damper | Drainable Blade | Extruded Aluminum

Standard Construction

Frame Heavy gauge extruded 6063-T5 aluminum, 4.1 in. (105 mm) x 0.081 in. (2 mm) nominal wall thickness Blades Drainable design, heavy gauge extruded 6063-T5 aluminum, 0.081 in. (2 mm) nominal wall thickness, positioned 45° on approximately 4 in. (102 mm) centers Seals Dual-durometer extruded vinyl blade seals, compressible stainless steel jamb seals Temperature Restrictions (-20° F) - (+180° F) (-29° C) - (+82° C) Linkage Exposed on-blade linkage Louver Depth 4.1 in. (105 mm) Construction Mechanically fastened Finish Mill Minimum Size 12 in. W x 12 in. H (305 mm W x 305 mm H) Maximum Single Section Size Uinted to 70 sq. ft. (6.5 sq. m) Wind Load 25 PSF (1.2 kPa)

Options and Accessories

- Actuators
- Bird Screen
- Extended Sill
- Filter Rack/Filter
- Flange Frame
- Glazing Frame
- Insect Screen
- Mounting Angles
- Security Bars
- Variety of Architectural Finishes
- 0.125 in. (3mm) nominal wall thickness

Performance Ratings

Airolite certifies that the K8504 louvers shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 511 and comply with the

requirements of the AMCA Certified Ratings Program. The AMCA Certified Ratings Seal applies to Water Penetration and Air Performance ratings.

Louvers were tested in accordance with AMCA Standard 500-L.

Performance of 48 in. x 48 in. (1219 mm x 1219 mm) Louver

Free Area Area 7.60 sq. ft. (0.706 sq. m) Percent 47.5% Performance at Beginning Point of Water Penetration Free Area Velocity 1018 fpm (5.171 m/s) Max Intake Volume 7737 cfm (3.651 m³/s) Performance at 6,000 CFM (2.832 m³/s) Intake Pressure Drop 0.106 in. wg (0.026 kPa)

K8504 Standard Details

Structural reinforcing members may be required to adequately support and install multiple louver sections within a large opening. Structural reinforcing members along with any associated installation hardware is not provided by Airolite unless indicated otherwise by Airolite. Options and accessories including, but not limited to, screens, filter racks, louver doors, and blank off panels are not subject to structural analysis unless indicated otherwise by Airolite.

K8504

Combination Louver/Damper | Drainable Blade | Extruded Aluminum

Airflow Resistance

Standard Air - 0.075 lb/ft3 (1.2 kg/m3)

Test size 48 in. x 48 in. (1219 mm x 1219 mm)

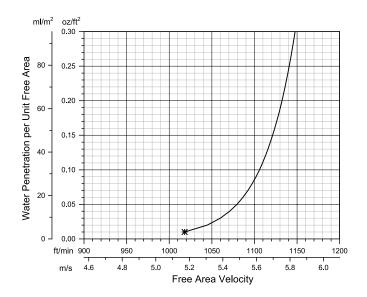

Model K8504 resistance to airflow (pressure drop) varies depending on louver application (air intake or air exhaust). Free area velocities (shown) are higher than average velocity through the overall louver size. See louver selection information. (Test Figure 5.5-6.5)

Water Penetration

Standard Air - 0.075 lb/ft3 (1.2 kg/m3)

Test size 48 in. x 48 in. (1219 mm x 1219 mm) Test duration of 15 min.

The AMCA Water Penetration Test provides a method for comparing various louver models and designs as to their efficiency in resisting the penetration of rainfall under specific laboratory test conditions. The beginning point of water penetration is defined as that velocity where the water penetration curve projects through 0.01 oz. (3 g) of water (penetration) per sq. ft. (m²) of louver free area.

*The beginning point of water penetration for Model K8504 is 1018 fpm (5.171 m/s) free area velocity. These performance ratings do not guarantee a louver to be weatherproof or stormproof and should be used in combination with other factors including good engineering judgement in selecting louvers.
