

## Application

Model DFDAF-310 is a dynamic rated multi-blade fire damper with airfoil style blades for use in walls, floors, and partitions with fire resistance rating of less than 3 hours. This damper may be installed vertically (with blades running horizontal) or horizontally and is rated for airflow in either directions.

This model has a manual quadrant which allows the DFDAF-310 to function as both a fire damper and a manual balancing damper.

## Sleeve and Sideplate Dimensions

The drawings below and corresponding table show the position of the DFDAF-310 damper when mounted in a factory sleeve ("A" dimension). The standard mounting locations provide enough space for the mounting of manual quadrant(s) and allow space for installation of retaining angles and duct connections. The following options may affect the range of available mounting locations: transitions, security bars, grille tabs.

The standard location of a damper mounted in a factory sleeve ("A" dimension) is shown below. The damper can be positioned at other locations within a range of 7 3⁄16 in. (183mm) to 16 in. (406mm) for the "A" dimension.

Sleeve

Sideplate

in. (mm)	With Sleeve		Sideplate Damper Location "A"
	Minimum Damper Location "A"	Maximum Damper Location "A"	
Dampers with no OCI	7 3⁄16 in. (183)	16 (406)	6 3⁄16 (157)
Height < 12 in. (305) OCI	12 (305)	16 (406)	12 (305)
Height ≥ 12 in. (305) OCI	7 3⁄16 in. (183)	16 (406)	12 (305)

**NOTE:** Entire damper frame is not required to be installed within the wall. The damper blades, when closed should be contained within the wall.

## Multiple Section Dampers

Dampers larger than maximum single section size are supplied as a factory assembly of two or more sections of equal size. The following figures show maximum damper section size and assembly configurations for multi-section dampers. Larger damper sizes may ship in multiple sections.
