Model VPBD
Arrangement 9

Sizes and Performance

- 12" to 60" impeller diameters
- Airflow to 103,000 CFM
- Static pressure to 5.5" w.g.
- 37 unique diameters and hub-to-tip ratios

Models VP/VPBD is available with UL/cUL 705 listing for electrical, File No. E158680.

Aerovent, a Twin City Fan Company, certifies that the Model VP and VPBD Vaneaxial fans shown herein are licensed to bear the AMCA Seal. Certified performance data may be found in Aerovent's Fan Selector software.

Overview

VP | VPBD

The Model VP/VPBD Type "P", vaneaxial fan is ideal for installation in hospitals, schools, research labs, fume exhaust systems and high moisture areas. The fan housing is fitted with aerodynamically designed, stationary straightening guide vanes on the air discharge side of the impeller. The guide vanes are welded to both the inner cylinder and the fan housing interior. The vanes function to aid in the elimination of swirl and turbulence downstream of the fan, thereby recovering rotational energy losses, improving efficiency and static pressure capability, and reducing fan noise generation.

The Type "P" Vaneaxial Fans from Aerovent are designed to handle a wide range of requirements, from general ventilation to process air supply. Its mounting flexibility, which allows it to be mounted as part of the ductwork, makes it ideal for many industrial and commercial applications.

Typical Applications Include

Data Center Exhaust, General HVAC, Generator Room Ventilation, Swimming Pool Exhaust, Kitchen Exhaust, Dishwasher Exhaust, Elevator Shaft Exhaust/Pressurization, Emergency Smoke Exhaust, Stairwell Pressurization

Configurations

Direct and Belt Driven – vertical and horizontal mount configurations

Impeller Type

Aluminum

Optional Construction

Clamshell Construction, Swingout Construction, AMCA Type A or B Spark Resistant Construction, High Moisture Modification, High Temperature Construction (up to 250°F)

Certifications

AMCA Air / FEI and UL 705 Listed for Electrical

Applications

VP | VPBD

Ventilation

Whether duct mounted or provided with an inlet bell for open inlets, the VP/VPBD Type "P" is the logical choice for almost any ventilating system. Available as either a supply or return fan, the magnitude of fan/impeller combinations to choose from ensures the user of a high efficient, economical, quiet, long-running fan.

Industrial Process

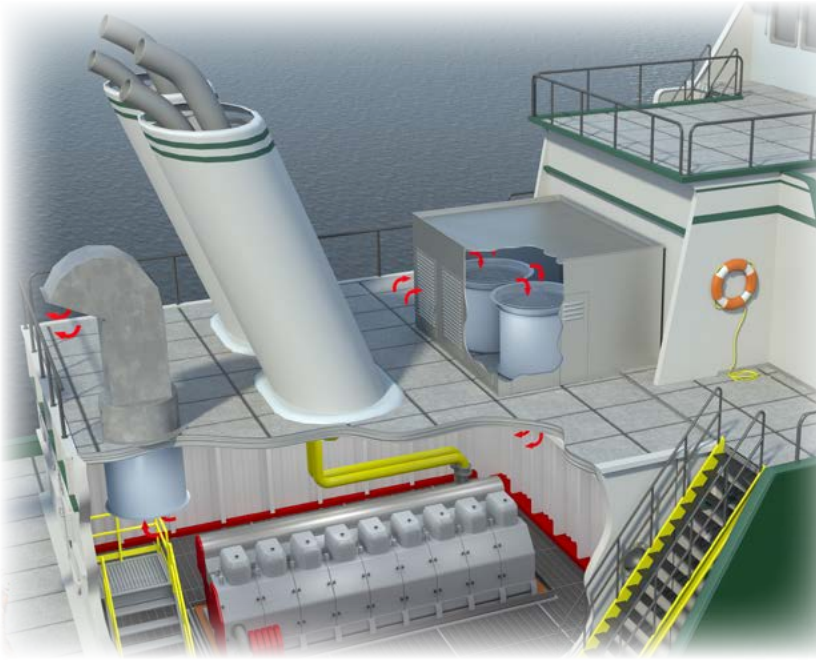
Designed for rugged industrial service, the VP/VPBD Type "P" is an ideal component for most industrial air systems. The heavy-duty housing construction and large diameter shaft/bearing combinations can handle the toughest of airstreams.

Upblast Style Power Roof Ventilator

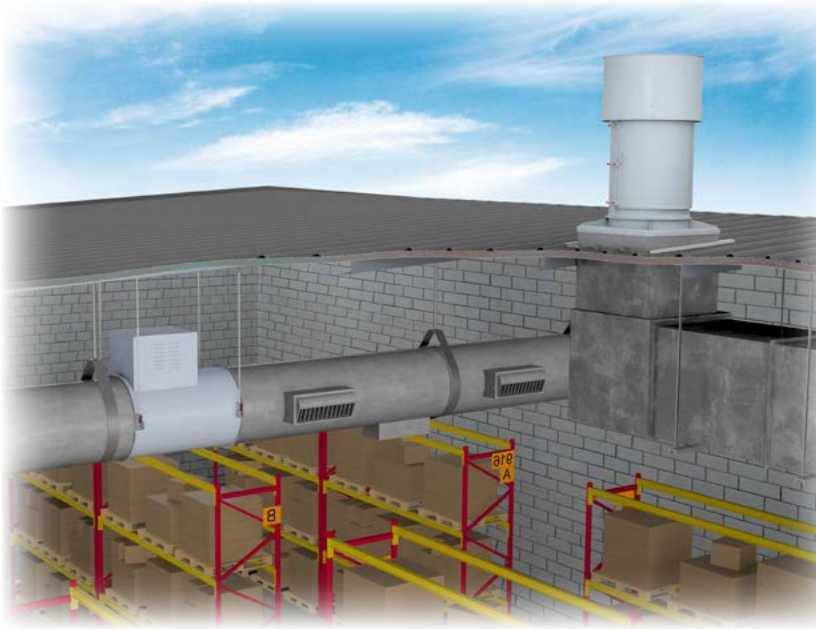
Fitted with a stack cap, curb cap and a weather cover, the VP/VPBD Type "P" makes an ideal upblast style power roof ventilator. The broad band high efficiency range makes this fan ideal for installation both with and without ductwork attached.

Easy Access Fans

Our clamshell design was crafted to minimize downtime in applications requiring frequent cleaning. Need the ability to perform maintenance too? Our swingout design provides unparalleled accessibility to critical components, such as the shaft, bearings, V-belt drive and impeller assembly, all without the hassle of ductwork removal to fit all of your maintenance and cleaning needs. See more about how our designs provide you value on page 5.



Engine Room Exhaust



Warehouse Application with VRM & HCH Fans

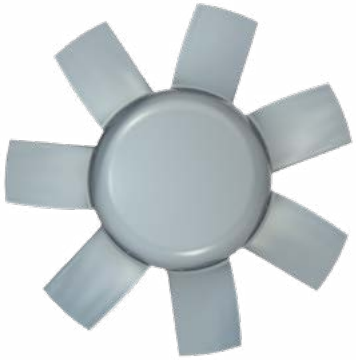
Energy Regulations

Aerovent supports energy efficiency regulations enacted by the U.S. Department of Energy (DOE) and specific states. The selection and application of fan products is a significant part of these regulations. Engineers and specifiers must understand how to apply Aerovent products to their specific applications to meet applicable DOE and state regulatory requirements. Aerovent has made significant investments in product testing and development to provide efficient products. Developments in Aerovent's Fan Selector software are in place to aid your decision in product selection to assist with meeting the efficiency requirements as stipulated in the applicable regulations.

Construction Features

Housing
Housings are one-piece, heavy-gauge, hot-rolled steel construction. Flanges on both the inlet and outlet are integrally rolled and punched for attachment to ductwork or accessories as necessary. The sheet seam is continuously-welded and ground smooth to assure efficient airflow through the housing. On Arrangement 4 direct drive units neither the impeller nor the motor protrudes beyond the housing, allowing for an easy mount into existing ductwork.

Impeller
The heart of the Type "P" fans lies in its impeller. Cast of high strength aluminum alloy, the one-piece impeller has been developed to maximize the highest efficiency possible. Attention to detail in blade and hub design have created what is felt to be the most efficient and reliable axial fan on the market today. With the wide range of hub-to-tip ratios available, there is a fan to meet any air movement requirement.



Guide Vanes
The fan housing is fitted with aerodynamically designed stationary straightening guide vanes on the air discharge side of the impeller. The guide vanes are welded to both the inner cylinder and the fan housing interior and function to aid in the elimination of swirl and turbulence downstream of the fan thereby recovering rotational energy losses, improving efficiency and static pressure capability and reducing fan noise generation.

Belt Fairing
The V-belt drive assembly is extended through a two-piece belt fairing. The belt fairing is an aerodynamically designed tube, welded continuously to both the inner cylinder (bearing housing) and the fan housing, thus protecting the V-belts from the direct blast of the airstream.

AEROVENT
INDUSTRIAL VENTILATION SYSTEMS

Hub-To-Tip Ratio
The multitude of impellers evolves from nine basic castings. Each casting is machined and cut to the proper diameter. By cutting the same model casting to one of several different diameters, different hub-to-tip ratios are created. Since each hub ratio has slightly different pressure/efficiency characteristics, the freedom of having several impellers (different hub ratios) for a set diameter provides the opportunity to maximize efficiency at the required point of rating.

Shaft and Bearings/Inner Cylinder
Shafts for belt driven units are ground and polished steel construction machined to a suitable diameter to allow the rotating assembly to operate well below the first critical speed.

Bearings are ball or roller type selected for a minimum average life of 200,000 hours. Bearing life is determined in accordance with standards set forth by AFBMA (Anti-Friction Bearing Manufacturers Association). All bearings are provided with extended lubrication lines terminating at the housing exterior.

The complete shaft and bearing assembly is mounted within the inner cylinder, safely isolating these components from the high velocity airstream.

Drive Isolated from Airstream
The shaft and bearing assembly is mounted within the inner cylinder to isolate these components from the high velocity airstream.

The V-belt drive assembly is extended through a two-piece belt fairing. The belt fairing is an aerodynamically designed tube, designed to maximize fan efficiency, minimize air blockage and reduce noise generation.

Motor
Motors for Arrangement 9, belt driven fans are standard foot-mounted NEMA design. All of the various enclosures (open drip-proof, totally enclosed, explosion proof, etc.) can be accommodated through the use of an adjustable motor base. This motor mounting platform pivots at several locations to offer a wide range of adjustment for belt tension.

Motors for Arrangement 4, direct drive fans are foot-mounted, NEMA standard, totally enclosed fan cooled (TEFC), continuous-duty, ball bearing type with Class “F” insulation and of cast iron construction when commercially available. Motors, which are equipped with grease lubricated bearings, have extended lube lines to the housing exterior. For ease of wiring the motor, wiring connections are extended to an external conduit box mounted on the fan exterior. The fan housing exterior has a duplicate motor nameplate mounted adjacent to the fan nameplate.

Spark Resistant Construction

Fan applications may involve the handling of fumes or vapors. Such applications require careful consideration by the system designer to ensure the safe handling of such gases. Aerovent offers the following classifications of spark resistant construction per AMCA Standard 99-0401. It is the specifier's or the user's responsibility to specify the type of spark resistant construction with full recognition of the potential hazards and the degree of protection required.

Type A - All parts of the fan in contact with the airstream must be made of nonferrous material — usually aluminum and limited to 200°F.

Type B - The fan shall have a nonferrous impeller and nonferrous rub ring about the opening through which the shaft passes — usually aluminum impeller and rub ring and limited to 200°F. Consult factory for availability.

Swingout Construction

Swingout construction provides easy access to the fan for cleaning and general maintenance without removing it from the ductwork. When quick-open clamp latches are released, the door swings out on heavy-duty hinges to provide out of the airstream access to the impeller for cleaning. For additional access to the shaft and bearings, a split inner cylinder is provided. Available in sizes 21-60. See dimensional data on page 12 for motor frame size limits.

Swingout Construction

Clamshell Construction

Clamshell construction is ideal for applications needing regular cleaning. Depending on the size, one door (sizes 18-36) or two doors (sizes 42-60) are secured with quick access latches. These doors open outward and allow access to the internal components of the fan. As standard, there is an access door on the inner cylinder, allowing easy access to clean around the bearings. It is essential to follow proper safety precautions during cleaning. If bearing, shaft or impeller replacement is required, the fan should be removed from the ductwork or roof to facilitate safe replacement of parts. If replacement of these parts while ducted or on the roof is required, it is recommended to use swingout construction.

High Moisture Modification

A shaft seal and added gaskets to the bearing housing protect the rotor assembly from damage due to moisture ingress. Ideal for steam and high humidity applications.

Clamshell Construction

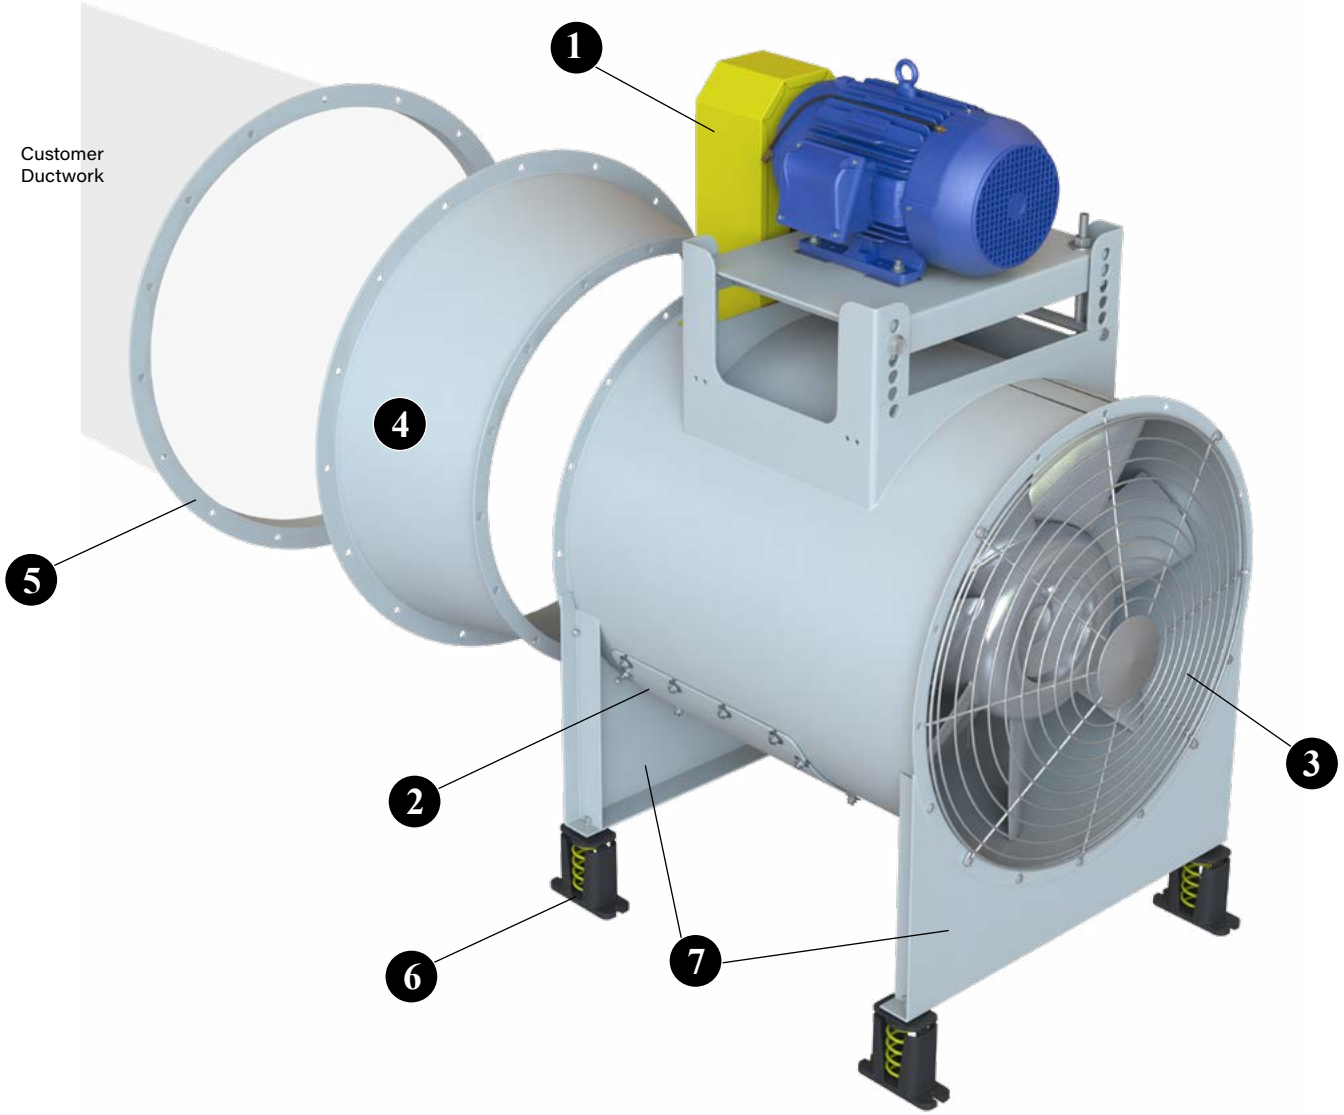
INDUSTRIAL VENTILATION SYSTEMS

Options/Accessories



1 Belt Guard Belt guard protects personnel from the moving drive parts. OSHA and quick access guards are available.

2 Access Door For quick impeller inspection and maintenance. Access doors are specified where examination and cleaning of the fan interior is required.

3 Safety Screens Available for mounting in the fan inlet or outlet in non-ducted applications.

4 Inlet Cone Heavy-gauge and spun to match the impeller intake rim to ensure smooth airflow. Inlet cone flange is prepunched for mounting. Inlet cones are shipped loose as standard. An integral inlet cone is optional.

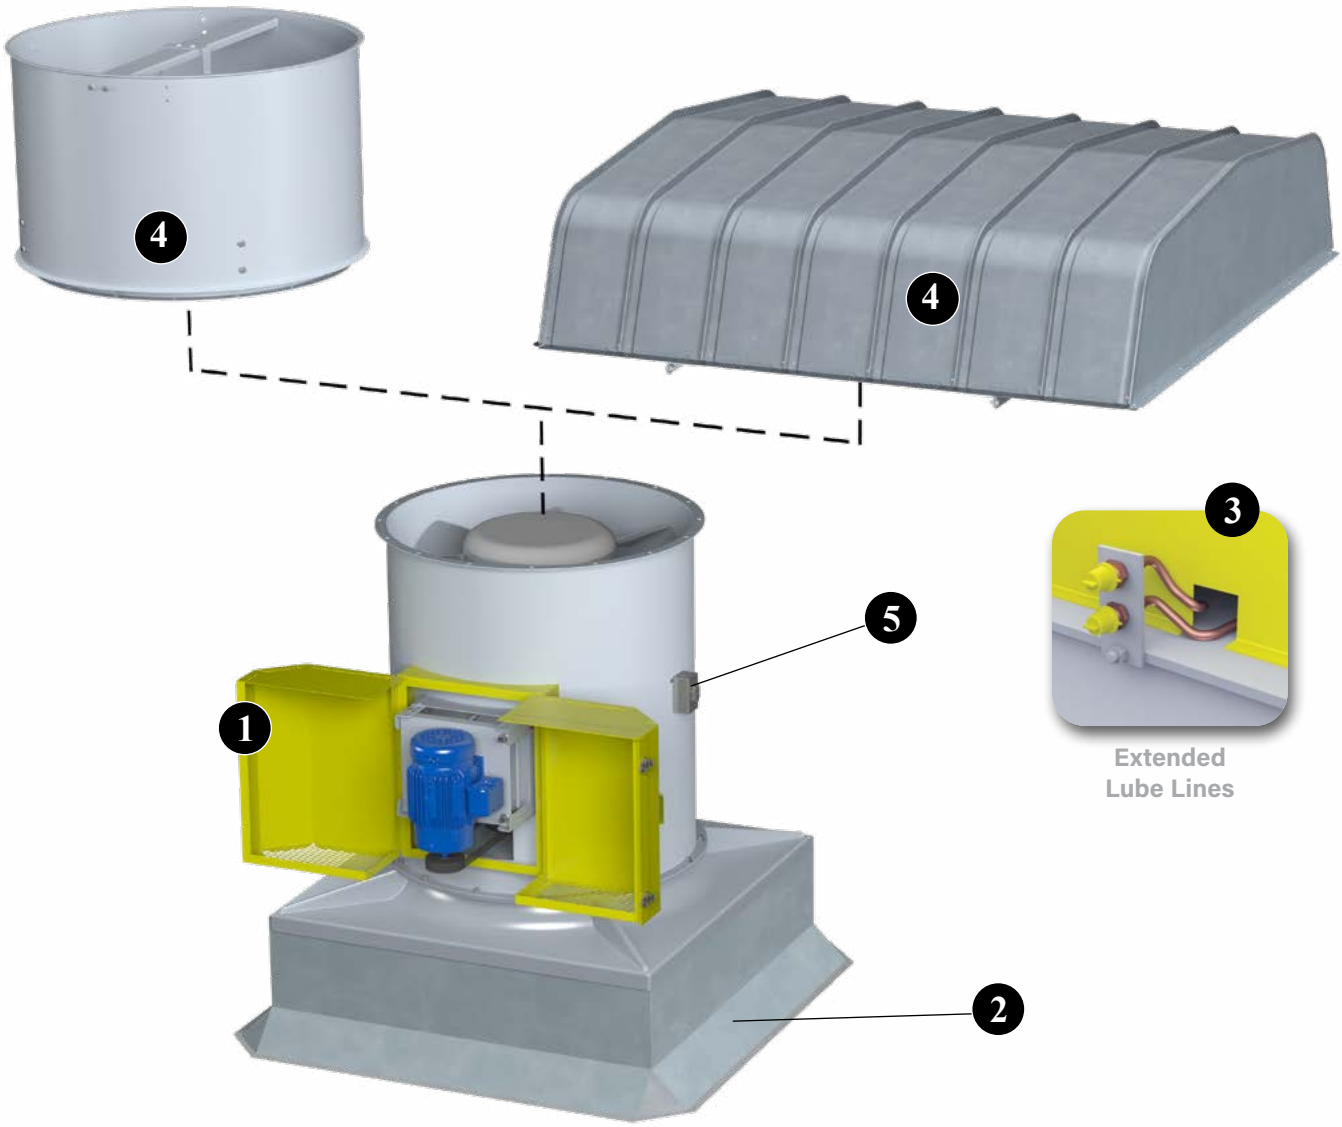
5 Companion Flange Companion flanges are commonly connected to a user's duct for easy installation of flexible connections between the fan and duct. Companion flanges and flex connectors are punched to match the fan's inlet or outlet punching.

6 Vibration Isolators Spring type vibration isolation mounts are available to damper vibration and noise transmission in floor mounted installations. Also available in rubber-in-shear type construction.

7 Support Legs, Horizontal For horizontal flow with floor mounting, support legs are welded to the fan flange with bolt holes aligned for connection of ductwork.

Other Accessories Include:

- Inlet Bell
- Vibration Isolators (Ceiling Hung)
- Shaft Seal
- Support Legs (Brackets)
- Outlet Cone
- Suspension Clips Horizontal Ceiling Hung



1 **Weather Cover** For outdoor installations, the weather cover completely encloses the motor and V-belt drive from the elements. Available in one-piece or clamshell construction. Provided with slots for ventilation, the cover is easily removable for inspection and maintenance. Weather covers are available for either horizontal or vertical flow fans.

2 **Canted Roof Curb** Prefabricated roof curbs are available in heavy-duty galvanized steel or aluminum construction, in heights of 8", 12" or 18". The canted curb is provided with a factory installed wood nailer. Curbs are provided with 1.5" of insulation as standard and feature continuously-welded seams for added rigidity and moisture protection. Prefabricated curbs are also available in raised cant, pitched and peak models. Minimum 12" high curbs are recommended for use with motorized dampers.

3 **Extended Lube Lines** Lube lines with grease fittings are extended to the outside of the fan housing on all models.

4 **Stack Cap & Hood** Stack caps are provided as a standard accessory on vertical roof mounted configurations. Stack caps feature butterfly type dampers that seal out weather when the fan is shut off. Filtered hood options available. Hoods are designed for either exhaust or supply airflow and can be fitted with Merv 8 throw away filters or aluminum washable filters to remove particulate from the supply airstream.

5 **NEMA 3R Disconnect Switch** Disconnect switches offer superior environmental protection. From waterproofing to hazardous environments, know that you and your equipment are safe. Positive electrical shutoff during fan cleaning or maintenance provides additional safety and peace of mind. For more information about disconnect switches, see page 9.

Mounting Configurations

Horizontal Construction

Horizontal Base Mounted (HBM) — Support legs are provided at each end of the fan for floor mounting.
Horizontal Ceiling Hung (HCH) — For duct mounted fans, four suspension clips are welded to the fan casing to allow ceiling suspension using rod hangers.
Horizontal (HOR) — For mounting configurations where support legs and suspension clips are not required.

Vertical Construction

Floor or Ceiling Mounted (VUI/VUO/VDI/VDO) — Four vertical brackets are welded to either end of the fan housing. Bracket location is determined by airflow direction and support details (see below).
Roof Mounted (VRM) — A curb cap provides weathertight seal for roof curb mounted fans. A stack cap and weather cover are also available for the upblast style roof ventilator.
Vertical (VUN/VDN) — For mounting configurations where support brackets are not required.

Canted Roof Curbs

- Constructed of galvanized steel with continuously-welded seams
- Large 3" built-in 45° cant to accommodate roofing material to top of curb. Cant is beveled at corners for better support of roofing material
- Wood nailer (1 1/2") secured to top ledge
- Lined with 1 1/2" fiberglass fire-resistant, sound-absorbing insulation
- Damper shelf standard
- Options: Aluminum construction, burglar security bars, metal liner (galvanized or aluminum), special heights up to 24".

Self-Flashing & Straight-Sided Roof Curbs

- Constructed of galvanized steel with continuously-welded seams
- Wide base plate (flashing) to ensure watertight seal to roof
- Top ledge covered with 3/16" polystyrene gasket (self-flashing) for weather seal and to reduce metal-to-metal conducted noise
- Wood nailer secured to top ledge (straight-sided)
- Lined with 1 1/2" fiberglass fire-resistant, sound-absorbing insulation
- Damper shelf standard
- Straight-sided roof curbs are constructed with the same features as the self-flashing curbs, but are one dimensional to allow for field supplied cants and roofing material to be brought up to the top of the curb
- Options: Aluminum construction, burglar security bars, metal liner (galvanized or aluminum), special heights up to 24", single- or double-pitched curbs for sloping roofs

Self-Flashing Vented Roof Curbs

For High Temperature Applications

- Completely assembled unit, easier to install and less expensive than a field constructed curb
- Constructed of galvanized steel with continuously-welded seams and wide base flashing for watertight seal to roof
- Meets NFPA-96 code requirements
- Top ledge covered with 3/16" polystyrene gasket
- Furnished with ventilation slots

Curb Adapters

- Constructed of galvanized steel with continuously-welded seams
- Top ledge covered with 3/16" polystyrene gasket to reduce metal-to-metal conducted noise and act as a weather seal
- Available in enlarger or reducer (shown) models

Disconnect Switches

Disconnect switches provide positive electrical shutoff during fan cleaning or maintenance.

NEMA 3R Disconnect Switch

A NEMA 3R, rain proof, disconnect is available shipped loose for field mounting and wiring or factory mounted and wired externally.

NEMA 3R
Disconnect Switch

NEMA 4 Disconnect Switch

A NEMA 4, water and dust tight, disconnect is available shipped loose for field mounting and wiring or factory mounted and wired externally.

NEMA 7/9 Disconnect Switch

A NEMA 7/9 disconnect switch is recommended on fans with explosion proof motors. The NEMA 7/9 switch is designed for use with fans operating in hazardous environments. Available shipped loose for field mounting and wiring. (Not shown.)

NEMA 4
Disconnect Switch

AEROVENT
INDUSTRIAL VENTILATION SYSTEMS

Arrangements

Arrangement 9 Belt Driven

For applications that require the motor to be out-of-the-airstream or the versatility of a belt driven fan, the Arrangement 9 Model VPBD is the perfect choice. Driven through either a fixed or adjustable V-belt drive system, the exact point of rating can be achieved. Any future change in rating can be accomplished through a simple sheave change. Good for operation up to 200°F as standard, the Arrangement 9 can be customized to handle even the most severe of conditions.

Arrangement 4 Direct Drive

Where space constraints require the use of a complete "in line" fan or the desire is for a simple, dependable fan with minimum maintenance requirements, the direct drive Arrangement 4 is the logical choice. Constructed with the fan impeller mounted directly on the motor shaft, this fan provides premium efficiency with minimal obstructions in the airstream.

AEROVENT
INDUSTRIAL VENTILATION SYSTEMS

Models

VP | VPBD

Fans shall be Model VP/VPBD Vaneaxial Fans as manufactured by Aerovent, Minneapolis, Minnesota. Fans shall be Arrangement 9, V-belt driven with the impeller mounted on a separate shaft and bearings supported completely within an enclosed tube isolated from the high velocity airstream or Arrangement 4, with the impeller mounted directly on the motor shaft and with the impeller and motor assembly enclosed entirely within the fan casing.

PERFORMANCE — Performance ratings shall conform to AMCA Standard 211 (air performance). Fans shall be tested in accordance with ANSI/AMCA Standard 210 (air performance) and 300 (sound performance) in an AMCA accredited laboratory. Fans shall be licensed to bear the AMCA certified ratings seal for air and fan energy index (FEI).

Model VP/VPBD shall be available UL 705 listed. Fans shall bear a permanently attached nameplate displaying model and serial number of the unit for future identification.

HOUSING — Fan housings shall be welded of hot rolled steel. Inlet and outlet flanges are standard.

GUIDE VANES — Fan housings shall be fitted with aerodynamically designed stationary straightening guide vanes on the air discharge side of the impeller. The guide vanes shall be welded to both the inner cylinder and the fan housing interior and function to aid in the elimination of swirl and turbulence downstream thereby recovering rotational energy losses, improving efficiency and static pressure capability, and reducing fan noise generation.

IMPELLER — The fan impeller shall be a solid one-piece casting of aluminum and shall contain seven blades and an integral center hub. The impeller shall have blades of airfoil shape designed with a variable hub ratio system to allow the selected fan to operate at the highest efficiency possible. Impellers shall be machined to the proper diameter so that blade tip clearance shall be within tolerance necessary to ensure certified fan performance. The impeller shall be secured to the fan/motor shaft with a taper lock bushing.

SHAFT (ARR. 9) — Shafts shall be AISI 1040 or 1045 hot rolled steel, accurately turned, ground, polished and ring gauged for accuracy. Shafts shall be sized for the first critical speed of at least 1.43 times the maximum speed.

BEARINGS (ARR. 9) — Bearings shall be heavy-duty, grease lubricated, anti-friction ball or roller, self-aligning, pillow block type and selected for a minimum average bearing life (AFBMA L-50) in excess of 200,000 hours at the maximum fan RPM. All bearings are provided with pre-filled factory extended lubrication lines terminating at the housing exterior.

DRIVE (ARR. 9) — The fan shall be equipped with a (fixed/adjustable) pitch V-belt drive selected to operate the fan at the correct operational RPM. The V-belt drive shall consist of cast iron sheaves and anti-static conducting belts and shall be selected with a (1.2/1.5) safety factor based upon the required brake horsepower of the fan.

The complete fan shaft and bearing assembly is mounted within a steel fabricated inner cylinder. The V-belt drive assembly is extended through a two-piece belt fairing. The belt fairing shall be an aerodynamically shaped tube designed to maximize fan efficiency. The belt fairing is welded continuously to both the inner cylinder that houses the fan shaft and bearings and the fan housing.

MOTOR — Motors for Arrangement 9 fans shall be manufactured in accordance with current applicable standards of IEEE and NEMA and, where applicable, shall meet current EPACT standards. Motors shall be foot-mounted, NEMA standard (ODP, TEFC, Explosion-Proof), continuous-duty, ball bearing type with class (B, F) insulation and of cast iron construction when commercially available.

Motors for Arrangement 4 fans shall be foot-mounted, NEMA standard, totally enclosed fan cooled (TEFC), continuous-duty, ball bearing type with class "F" insulation and of cast iron construction when commercially available. For ease in wiring the motor, wiring connections shall be extended to an exterior conduit box located on the exterior of the fan housing. A duplicate motor nameplate shall be mounted on the exterior of the fan adjacent to the fan nameplate. External grease fittings with pre-filled factory extended grease leads shall be supplied for lubrication of the motor bearings on all motors that provide grease fittings.

FINISH — The entire fan assembly, excluding the impeller and shaft, shall be properly washed and pretreated before application of a rust-preventative primer, if called out on the order. After the fan is completely assembled, a finish coat of paint shall be applied to the entire assembly, if called out on the order. The fan shaft shall be coated with a petroleum-based rust protectant.

FACTORY RUN TEST — All fans with motors and drives mounted by Aerovent shall be completely assembled and test run as a unit at the specified operating speed prior to shipment. Each impeller shall be statically and dynamically balanced in accordance with ANSI/AMCA 204-96 "Balance Quality and Vibration Levels for Fans" to Fan Application Category BV-3, Balance Quality Grade G6.3. Balance readings shall be taken by electronic type equipment in the axial, vertical and horizontal directions on each of the bearings. Records shall be maintained and a written copy shall be available upon request.
