Belt and Direct Drive

 **GREENHECK**
Building Value in Air.

February
2019

Quiet & Efficient Plenum Fans

Plenum fans are designed and engineered to provide superior performance and reliability in commercial or industrial applications. Our products are manufactured with state-of-the-art laser, forming, spinning and welding equipment, and endure our quality control testing to ensure trouble free start-up. They are designed for unhooded operation, resulting in a savings of the space normally occupied by the fan housing. Additional space savings are realized when multiple duct takeoffs are required. Ductwork is connected directly to the pressurized plenum without intermediate transitions.

Typical applications include:

- Custom air handlers
- Built-up air handlers
- Packaged air handlers
- Parking garages
- General supply and return system

Greenheck Fan Corporation certifies that the model APD, APM, APH and HPA plenum fans shown herein are licensed to bear the AMCA seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and Publication 311 and comply with the requirements of the AMCA Certified Ratings Program.

Greenheck Fan Corporation certifies that the model APF plenum fans shown herein are licensed to bear the AMCA seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program.

Made in U.S.A.

Greenheck plenum fans are designed and built in one of two manufacturing locations, Schofield, WI and Shelby, NC. Multiple manufacturing locations enables us to build fans and get them to you, our customer, faster.

Benefits of Greenheck's plenum fans

- Designed, engineered, and tested prior to shipment to provide years of smooth, vibration-free operation with minimal maintenance.
- Tiered model approach gives you flexibility in size, performance, and construction, matching the appropriate model to your application.
- 7- or 12-bladed wheel options allow you to select a model based on what is important to you. Plenum fans can be selected based on performance, efficiency or price point.
- Quick and easy selection options along with AutoCAD® and Revit® models available for download and integration into plan drawings, custom equipment schedules and specifications.
- CAPS® selection software leads the industry in providing selection details, options, accessories, and full submittal packages. Or use eCAPS®, an easy-to-use cloud based cross-model selection program. eCAPS quickly ranks the tiered models based on performance, providing detailed estimated first cost, operating costs, weights, and dimensions. All fans are selectable with N-1 redundancy.
- Easy installation with integral lifting points.

Multiple solutions for your plenum design needs.

The **APD** is a commercial grade plenum fan that incorporates performance and reliability into a lighter duty, economical design. The compact direct drive APD eliminates the cost, maintenance and complexity of belt drive plenum fans. When combined with a variable frequency drive (VFD), air volumes can easily be matched to changing building requirements or overcome increased pressures from dirty filters. APDs are an excellent option as a stand-alone single fan or in parallel fan array applications.

- 1,000 - 18,000 cfm, up to 10 in. wg
- Bolted galvanized frame
- 7-bladed backward curved wheel
- Ideal for light to medium duty applications
- Direct drive

APF plenum fans are the ideal solution for horizontal wall mounting applications that require speed control. The Vari-Green® electronically commutated (EC) motors have integrated controls that only need a 0-10V signal (4-20 mA option), no VFD and no additional wiring required to adjust speeds. APF plenum fans are low maintenance, lightweight and have a shorter, more compact length, making it an excellent choice in multiple fan array applications or as a retrofit option.

- 2,000 - 14,000 cfm, up to 6.5 in. wg
- Quad-lock, bolt-together galvanized frame
- High-efficiency, 7-bladed backward curved wheel
- Vari-Green® EC motor

APM plenum fans are an ideal cost-effective solution for light duty to mid-range performances required in Class I and the majority of Class II ranges. Fans are available in both belt and direct drive designs having the motor mounted directly to the fan to reduce the fan's footprint. This is an excellent selection for retrofit and replacement applications and in variable air volume systems.

- 1,000 - 41,000 cfm, up to 8 in. wg
- Bolted galvanized or coated steel frame
- 12-bladed aluminum airfoil wheel
- Class I and most of Class II performance ranges
- Belt and direct drive

APH plenum fans are designed and engineered for superior performance and reliability. It is available in both belt and direct drive with an extensive accessory offering. Quiet and efficient operation is achieved through a 12-bladed, airfoil aluminum wheel. Model APH is ideal for industrial applications that require welded construction, coated framework. Available in multiple configurations and the highest performance capabilities.

- 1,000 - 209,000 cfm, up to 12.5 in. wg
- Welded and coated steel frame
- 12-bladed aluminum airfoil wheel
- Available up to Class III
- Belt and direct drive

HPA housed plenum fans are designed and engineered to provide superior performance and reliability in commercial or industrial applications. The HPA can be used as a single fan in a sound critical application or in parallel to construct a fan array system. The HPA features a modular design with a structural housing that allows multiple modules to stack side-by-side and on top of one another to form an array.

- 900 - 45,000 cfm, up to 7 in. wg
- Bolted galvanized frame
- 12-bladed aluminum airfoil wheel
- Direct drive

Charts show performance capabilities by model and size. For complete AMCA licensed performance, refer to Greenheck's CAPS or eCAPS selection programs.

APD Performance

APF Performance

APM Performance

APH Performance

HPA Performance

Sound Attenuating Housing (HPA)

The fan assembly is mounted inside a sound attenuating housing. The housing has a perforated galvanized inner liner that directs sound waves into two inches of sound absorbing fiberglass between the inner liner and the solid outer shell. The result is a reduction of sound levels.

Internal Vibration Isolation (HPA)

Neoprene isolators mounted between the fan assembly and the sound attenuating housing reduce vibration, eliminating the need for isolators and gaskets between modules. Flexible gasket material between the inlet cone and sound attenuating housing creates an airtight seal.

Housing Options (HPA)

Three different sound attenuating housing sizes makes sizing the HPA extremely flexible. The standard housing is sized for optimum performance versus footprint. The compact housing offers a smaller footprint for applications with space constraints and the large housing offers increased air performance for higher efficiencies.

Construction - Galvanized (APD, APF, APM, HPA)

The fan assembly and sound attenuating housing are constructed of laser cut and die-formed heavy-gauge galvanized material.

Construction - Coated Steel (APM, APH)

Fully welded design with Permator™, an electrostatically applied polyester urethane powder coat finish.

Drives

All plenums are available with a direct drive fan. There are no belts to tension, sheaves to replace, or fan bearings lubricate. Lubricating the motor bearings is the only maintenance required.

APM and APH are available in belt drive configurations with cast iron sheaves and matched belts standard with a 1.5 drive service factor. Installed and aligned to provide reduced vibration levels and minimize installation costs.

Modular Construction (HPA)

The lightweight design makes the HPA plenum fans easy to transport and stack. There are no fasteners on the external casing, making it clean and easy to install. Inlet and outlet flanges makes connecting adjacent units quick and easy.

Wheels

7-Bladed (APD, APF)

Backward curved centrifugal wheel with seven blades, carbon steel materials and powder coated. Wheel features high efficiency operation with welded construction.

12-Bladed (APM, APH, HPA)

Backward inclined airfoil centrifugal wheel constructed from an aluminum material. The design saves energy and improves overall sound quality by reducing low frequency tones that are difficult to attenuate.

Vibration Analysis

All plenum fans are tested at the design speed in the factory after final assembly. Fans are checked for amp draw and levels recorded. APD, APF, APH and HPA (APM optional) are also subjected to a complete vibration analysis in three planes. The recorded filter-in vibration levels at the FRPM meet the requirements of AMCA/ANSI Standard 204-05 (Balance Quality and Vibration Levels for Fans). A permanent record of the test is kept on file at the factory for future reference. A copy of the test report is available upon request.

The following vibration limits apply to an assembled fan tested in Greenheck's factory.

Plenum Fan Offering

APD - straight forward design that is compact, low maintenance and efficient. Utilizing a bolted framework that is galvanized, the APD features a 7-bladed, backward curved wheel. Model designed for light and medium duty applications.

APF - utilizing a backward curved centrifugal wheel and an Vari-Green® electronically commutated (EC) motor brings cutting edge, high-efficiency operation to a fan that also has a reduced weight and a shorter, more compact length.

APM - provides higher efficiency while maintaining a compact size. This is an excellent selection for retrofit and replacement applications and in variable air volume systems. Utilizing a bolted framework that is either galvanized or coated, the APM, has a cost effective price point for light and medium duty applications. Quiet and efficient operation is achieved through a 12-bladed, airfoil aluminum wheel. This design saves energy and improves the overall sound quality by reducing low frequency tones that are difficult to attenuate. APM units are available in belt and direct drive with basic accessory options.

APH - designed and engineered for superior performance and reliability. With welded construction, coated framework, multiple configurations and the highest performance capabilities, model APH is ideal for industrial applications. APH features the exact same high efficiency / low sound 12-bladed wheel as the APM plenum. The APH is available in both belt and direct drive with an extensive accessory offering.

HPA - a direct drive plenum fan mounted inside a sound attenuating housing designed and engineered to provide superior performance and reliability in commercial and industrial applications. Model HPA can be used as a single fan in a sound critical application or in parallel to construct a fan array system. The HPA features a modular design with a structural housing that allows multiple modules to stack side-by-side and on top of one another to form an array or fan wall. Typical applications include packaged, built-up and custom air handlers, general supply and return systems and retrofit projects
