## INTRODUCTION

Fans are shown with cutaway sections to reveal interior and wheel. Actual fan models have totally enclosed sides.

The YORK® by Johnson Controls MFSI, Mixed Flow Silent Inliner fan, is a revolution in the fan industry. Its patented design, combines the compact, high volume advantages of axial fans with the low sound, high efficiency of tubular centrifugal fans. The outstanding air and sound performance of this fan set it apart from the competition. Its versatility allows it to compete with any vane axial, mixed flow, or tubular centrifugal fan. With the MFSI Inline fan, YORK brings its innovation to market and sets a new standard for performance.

### Efficient

The innovative wheel of the MFSI discharges air at an angle from the inlet, instead of perpendicularly. This gives the fan a much higher efficiency. A significant result is the broad peak efficiency curve that allows for using smaller fans without sacrificing sound levels or horsepower. Since the high volume to fan size ratio allows for smaller fans than other fan types (Table 1), the MFSI is also ideal for replacement and retrofit projects.

Because of the high efficiency, the wheel can rotate more slowly. The low speed wheel gives the bearings over 120,000 hours L10 (minimum) life for Class II fans. This is three times the typical bearing life of other axial or centrifugal inline fans. The L10 bearing life on Class I fans is 40,000 hours.

## Certifications & Listings

### AMCA Certification

YORK® by Johnson Controls MFSI certifies that the MFSI fans shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and AMCA Publication 311 and comply with the requirements of the AMCA Certified Ratings Program.

## Air Performance & Sound

The outstanding air and sound performance of this fan allows it to outperform a wide range of competitors, including axial, inline centrifugal, and mixed flow fans.

### Silent

Since the most efficient fan is also the quietest, the MFSI Inline Fan excels in both measures. Because it does not sacrifice the high volume advantages of axial fans, the MFSI can also take advantage of the high efficiency and low sound of tubular centrifugal fans. You get the best of both.

Basically, you get more CFM for the money without a large penalty in noise. The combination of low speed, low horsepower, low sound, extra long bearing life, and high efficiency makes the MFSI Inline fan the best selection for low, medium or high static pressure inline requirements.

MFSI Inline fans can be mounted horizontally or vertically. They handle CFM ranging from 1,300 - 155,000 and static pressure up to 7" W.G.

### UL Certification

Mixed-Flow Model MFSI will carry the cUL mark for the following:

- UL705 Power Ventilators (ZACT, ZACT7): File #E477250
- UL762 Power Ventilators for Restaurant Exhaust Appliances (YZHW): File #E477318
- UL Power Ventilators for Smoke Control Systems (ZAXH, ZAXH7): File #MH60894

### Static Efficiency

The static efficiency comparison table (Figure 1) graphically illustrates the advantage of the MFSI design as airflow increases. While other fan types are efficient at the “peak” of the fan curve, the MFSI design maintains a very high static efficiency across a broad volume range.

For example, comparing performance at a static pressure of 2.5" W.G., a 365 MFSI fan operating at 16,000 CFM has a static efficiency of 73.2%. The same fan has a static efficiency of 60.8% at 32,000 CFM. A typical mixed flow fan size 44 has a peak static efficiency of 65.4% at 16,000 CFM. However, as the volume increases to 32,000 CFM, the efficiency drops off to 17.7%.

**Figure 1**  
**Static Efficiency Comparison**

## OPTIONS & ACCESSORIES

### Bearings

Bearings shall be designed for heavy-duty service with a minimum L10 life of 40,000 hours for Class I fans and 120,000 hours for Class II fans. This performance is based

on the maximum operating speed of the fan's AMCA class, the operating temperature of the fan, and the horsepower. Bearings shall be heavy-duty, self-aligning pillow block type. Pillowblock bearings shall be either single row ball or double row spherical roller type. Fans shall be equipped with grease lines extending from the bearings to a point on the fan exterior.

### Companion Flanges

Provided as an accessory to accommodate slip connections at the inlet or discharge when required.

### Ceiling Brackets

Structural angles welded to the fan casing are provided to accommodate rod hangers where the fan is intended to be ceiling suspended.

### Access Doors

Located over the wheel, position is determined by installation requirements. Doors are quick-opening hinged type. All hardware is cadmium plated to resist corrosion.

### Variable Inlet Vanes

Externally mounted inlet vanes and inlet vanes that are "nested" inside the inlet cone are available as accessories. Suitable for manual or motorized operation. Constructed with stainless steel rods and friction-free bearings to assure smooth and vibrationless performance.

### Weather Cover

Provided with ventilation slots, affording complete weather-proof protection of motor and drive for outdoor installation.

### Lifting Lugs

These are a standard accessory on all YORK MFSI Inline fans, provided for convenience and ease in handling during installation.

### Totally Enclosed Belt Guard

Protective cover surrounding the moving parts, provided for personnel safety, are a standard accessory for MFSI fans. Available with tachometer opening where specified.

### High Temperature Package

Standard units without a weather cover are suitable for airstream temperatures up to 200°F. Standard units with a weather cover are suitable for airstream temperatures up to 150°F. See below for applications with elevated temperatures, including UL Smoke Control Systems

### UL Smoke Control

For smoke control systems, Heat and Smoke Removal configured fans are listed per UL for emergency smoke removal, referencing UL705, UL793, Industrial Risk Insurers (IRI), and Southern Building Code Congress International (SBCCI).

The UL standard requires the fan to run at 500°F for 4 hours (IRI) and 1000°F for 15 minutes (SBCCI) YORK Heat and Smoke Removal configured units are listed at 500°F for 4 hours and 1000°F (300 °C) for 1 hour. The additional 45 minutes at 1000°F (300 °C) will buy precious time in the event of a fire.

### Spark Resistant Construction

Type B and C are both available in accordance with AMCA specifications. Type B includes an aluminum wheel and nonferrous rub ring. Type C fans have steel wheels but are constructed with aluminum inlet cones and rub rings so that a shift in the wheel will not allow two ferrous parts to strike.

### Additional options:

- Shaft Seals
- Vibration Isolators
- Drains
- Inlet and/or Discharge Screens
- Special Paints or Coatings
- Special Metals such as Stainless Steel or Aluminum

### Fan Arrangement 9

Arrangement 9 fans are the most versatile type of inline fan. They can be horizontal base mounted, horizontal ceiling hung or vertically mounted. The motor is mounted on the fan housing, out of the airstream. Vertical units are constructed with reinforcing end brackets for either floor or ceiling mounting.

Base mounted Arrangement 9 MFSI Inline fans are available in sizes 150 through 730. Ceiling hung fans and vertical mounted fans are available from size 150 through 660.

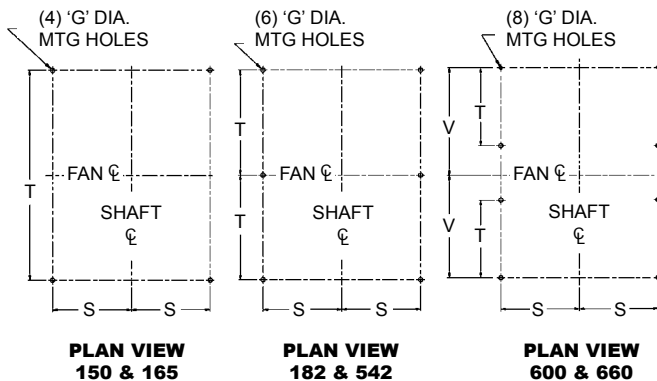

**FAN DATA** | Horizontal Ceiling Hung - Arrangement 9, Class I & II**DISCHARGE VIEW****Notes:**

1. All units equipped with "J" diameter shaft and bearings.
2. All units equipped with adjustable motor base.
3. Size 600 and up are split into front and rear sections.
4. Belt guard is standard on all sizes.
5. Motor is shown at position A.
6. For size 730 contact factory.
7. Fan duct mounting holes:  
 150 - 165 = (8) 9/16 dia. holes equally spaced about a "B" dia. bolt circle.  
 182 - 270 = (12) 9/16 dia. holes equally spaced about a "B" dia. bolt circle.  
 300 - 365 = (16) 9/16 dia. holes equally spaced about a "B" dia. bolt circle.  
 402 - 445 = (16) 13/16 dia. holes equally spaced about a "B" dia. bolt circle.  
 490 - 660 = (24) 13/16 dia. holes equally spaced about a "B" dia. bolt circle.
8. Dimensions should not be used for construction. Certified drawings are available upon request.

Performance shown is for Installation Type B: free inlet, ducted outlet. Power rating (BHP) does not include belt drive losses. Performance ratings do not include the effects of appurtenances in the airstream. **Bold** figures indicate maximum static efficiency. Approximate fan weights are less motor and accessories.

Performance shown is for Installation Type B: free inlet, ducted outlet. Power rating (BHP) does not include belt drive losses. Performance ratings do not include the effects of appurtenances in the airstream. **Bold** figures indicate maximum static efficiency. Approximate fan weights are less motor and accessories.

Performance shown is for Installation Type B: free inlet, ducted outlet. Power rating (BHP) does not include belt drive losses. Performance ratings do not include the effects of appurtenances in the airstream. **Bold** figures indicate maximum static efficiency. Approximate fan weights are less motor and accessories.

## 222

Wheel Dia.	Outlet Area	Tip Speed (FPM)	Maximum BHP	Max. Motor Frame Size
27.0 in.	4.93 sq. ft.	7.07 x RPM	1.26 (RPM / 1000) <sup>3</sup>	326T

Class	Fan Weight (Lbs.)	Wheel Weight (Lbs.)	WR <sup>2</sup> ① (Lbs. Ft. <sup>2</sup> )	Max. Wheel RPM <sup>②</sup> (Steel or Aluminum)
I	408	66	34	1825
II	430	78	41	2294

① WR<sup>2</sup> = Inertial Starting Force② Maximum RPM is based on operating temperature of 100°F.  
From 101°F through 200°F multiply RPM by 0.93.

Performance shown is for Installation Type B: free inlet, ducted outlet. Power rating (BHP) does not include belt drive losses. Performance ratings do not include the effects of appurtenances in the airstream. **Bold** figures indicate maximum static efficiency. Approximate fan weights are less motor and accessories.

## 245

Wheel Dia.	Outlet Area	Tip Speed (FPM)	Maximum BHP	Max. Motor Frame Size
30.0 in.	5.98 sq. ft.	7.86 x RPM	2.66 (RPM / 1000) <sup>3</sup>	326T

Class	Fan Weight (Lbs.)	Wheel Weight (Lbs.)	WR <sup>2</sup> <sup>①</sup> (Lbs. Ft. <sup>2</sup> )	Max. Wheel RPM <sup>②</sup> (Steel or Aluminum)
I	482	81	52	1665
II	507	93	58	2082

① WR<sup>2</sup> = Inertial Starting Force

② Maximum RPM is based on operating temperature of 100°F.  
From 101°F through 200°F multiply RPM by 0.93.

Performance shown is for Installation Type B: free inlet, ducted outlet. Power rating (BHP) does not include belt drive losses. Performance ratings do not include the effects of appurtenances in the airstream. **Bold** figures indicate maximum static efficiency. Approximate fan weights are less motor and accessories.

Performance shown is for Installation Type B: free inlet, ducted outlet. Power rating (BHP) does not include belt drive losses. Performance ratings do not include the effects of appurtenances in the airstream. **Bold** figures indicate maximum static efficiency. Approximate fan weights are less motor and accessories.

## 330

Wheel Dia.	Outlet Area	Tip Speed (FPM)	Maximum BHP	Max. Motor Frame Size
40.25 in.	10.8 sq. ft.	10.54 x RPM	11.68 (RPM / 1000) <sup>3</sup>	365T

Performance shown is for Installation Type B: free inlet, ducted outlet. Power rating (BHP) does not include belt drive losses. Performance ratings do not include the effects of appurtenances in the airstream. **Bold** figures indicate maximum static efficiency. Approximate fan weights are less motor and accessories.

## 365

Wheel Dia.	Outlet Area	Tip Speed (FPM)	Maximum BHP	Max. Motor Frame Size
44.5 in.	13.3 sq. ft.	11.65 x RPM	19.3 (RPM / 1000) <sup>3</sup>	365T

Class	Fan Weight (Lbs.)	Wheel Weight (Lbs.)	WR <sup>2</sup> ① (Lbs. Ft. <sup>2</sup> )	Max. Wheel RPM <sup>②</sup> (Steel or Aluminum)
I	1101	239	338	1072
II	1159	257	348	1341

① WR<sup>2</sup> = Inertial Starting Force② Maximum RPM is based on operating temperature of 100°F.  
From 101°F through 200°F multiply RPM by 0.93.

Performance shown is for Installation Type B: free inlet, ducted outlet. Power rating (BHP) does not include belt drive losses. Performance ratings do not include the effects of appurtenances in the airstream. **Bold** figures indicate maximum static efficiency. Approximate fan weights are less motor and accessories.

Performance shown is for Installation Type B: free inlet, ducted outlet. Power rating (BHP) does not include belt drive losses. Performance ratings do not include the effects of appurtenances in the airstream. **Bold** figures indicate maximum static efficiency. Approximate fan weights are less motor and accessories.

## 490

Wheel Dia.	Outlet Area	Tip Speed (FPM)	Maximum BHP	Max. Motor Frame Size
60.0 in.	23.9 sq. ft.	15.71 x RPM	86.59 (RPM / 1000) <sup>3</sup>	365T

Class	Fan Weight (Lbs.)	Wheel Weight (Lbs.)	WR <sup>2</sup> ① (Lbs. Ft. <sup>2</sup> )	Max. Wheel RPM <sup>②</sup> (Steel or Aluminum)
I	2494	459	1165	800
II	2625	488	1217	1000

① WR<sup>2</sup> = Inertial Starting Force② Maximum RPM is based on operating temperature of 100°F.  
From 101°F through 200°F multiply RPM by 0.93.

Performance shown is for Installation Type B: free inlet, ducted outlet. Power rating (BHP) does not include belt drive losses. Performance ratings do not include the effects of appurtenances in the airstream. **Bold** figures indicate maximum static efficiency. Approximate fan weights are less motor and accessories.

## 542

Wheel Dia.	Outlet Area	Tip Speed (FPM)	Maximum BHP	Max. Motor Frame Size
66.0 in.	29.3 sq. ft.	17.28 x RPM	139.46 (RPM / 1000) <sup>3</sup>	405T

Class	Fan Weight (Lbs.)	Wheel Weight (Lbs.)	WR <sup>2</sup> ① (Lbs. Ft. <sup>2</sup> )	Max. Wheel RPM <sup>②</sup> (Steel or Aluminum)
I	NA	NA	NA	NA
II	3266	629	1735	903

① WR<sup>2</sup> = Inertial Starting Force② Maximum RPM is based on operating temperature of 100°F.  
From 101°F through 200°F multiply RPM by 0.93.

Performance shown is for Installation Type B: free inlet, ducted outlet. Power rating (BHP) does not include belt drive losses. Performance ratings do not include the effects of appurtenances in the airstream. **Bold** figures indicate maximum static efficiency. Approximate fan weights are less motor and accessories.

Performance shown is for Installation Type B: free inlet, ducted outlet. Power rating (BHP) does not include belt drive losses. Performance ratings do not include the effects of appurtenances in the airstream. **Bold** figures indicate maximum static efficiency. Approximate fan weights are less motor and accessories.

## 730

Wheel Dia.	Outlet Area	Tip Speed (FPM)	Maximum BHP	Max. Motor Frame Size
89.0 in.	53.1 sq. ft.	23.3 x RPM	621.82 (RPM / 1000) <sup>3</sup>	405T

Class	Fan Weight (Lbs.)	Wheel Weight (Lbs.)	WR <sup>2</sup> ① (Lbs. Ft. <sup>2</sup> )	Max. Wheel RPM <sup>②</sup> (Steel or Aluminum)
I	NA	NA	NA	NA
II	7365	1298	6804	671

① WR<sup>2</sup> = Inertial Starting Force② Maximum RPM is based on operating temperature of 100°F.  
From 101°F through 200°F multiply RPM by 0.93.

Performance shown is for Installation Type B: free inlet, ducted outlet. Power rating (BHP) does not include belt drive losses. Performance ratings do not include the effects of appurtenances in the airstream. **Bold** figures indicate maximum static efficiency. Approximate fan weights are less motor and accessories.

N = Nested

#### Weather Cover

0 = None  
A = Horizontal Steel  
B = Hinged Steel

## ENGINEERING SPECIFICATIONS

- C = Horizontal 304 SS
- D = Hinged 304 SS
- E = Horizontal 316 SS
- F = Hinged 316 SS

### Drain

- 0 = None
- D = Drain
- P = Drain with Plug

### UL762 Construction

- A = Outdoor 300°F w/ Weather Cover
- B = Indoor 300°F w/ Belt Guard
- C = Outdoor 500°F w/ Weather Cover
- D = Indoor 500°F w/ Belt Guard

### UL Smoke Control

- 0 = None
- H = UL Smoke Control Package  
(500°F @ 4 Hours 1000°F @ 1 Hour)

### Horsepower

See selection software

### Motor RPM

- 0 = None
- 1200 = 6-Pole MTR
- 1500 = 4-Pole MTR (50HZ)
- 1800 = 4-Pole MTR
- 3600 = 2-Pole MTR
- 2S1W = 1800/900 1 WDG
- 2S2H = 1800/900 2 WDG
- 2S2W = 1800/1200 2 WDG

### Enclosure

- A = Automotive Duty
- E = Explosion Proof
- O = ODP
- S = Severe Duty
- T = TEFC

### Voltage

See selection software.

### Phase

- 1 = One Phase
- 3 = Three Phase

### Cycle

- 5 = 50 Hz
- 6 = 60 Hz

### Efficiency

- S = Standard
- P = Premium

## MFSI

Furnish and install as shown on the plans YORK® by Johnson Controls MFSI Inline fans of the non-overloading design and of the Arrangement 9. Unless otherwise directed, fans shall conform to the layout as shown on the drawings.

Fans shall be constructed of low carbon steel and painted with an approved coating. Each fan shall receive a documented inspection by a qualified inspector before leaving the factory. The inspection will include the welding, dimensions, bearings and overall workmanship.

## Performance

Fan air performance shall be based on tests conducted in accordance with AMCA Standard 210. Fans shall be non-overloading and shall have a sharply rising pressure characteristic extending through the operating range and continuing to rise well beyond the efficiency peak to assure quiet and stable operation under all conditions. Horsepower characteristics shall be truly self-limiting and shall reach a peak in the normal selection area.

## Wheels

Wheels shall be in accordance with the standard sizes adopted by AMCA for tubular fans. Wheels shall be the high efficient, non-overloading, airfoil type only. Airfoil blades shall be die-formed, double surface type blades continuously welded (stitch welding unacceptable) to a hub plate and wheel cone. All fans shall have tapered, smooth flowing, wheel cones (flat cones unacceptable). The standard coating shall be an industrial alkyd enamel.

## Shafts

Shafts shall be AISI C-1045 hot rolled steel turned, ground and polished. The shaft's first critical speed shall be at least 142% of the fan's maximum operating speed. This critical speed will refer to the top of the speed range for the fan's AMCA class.

## Bearings

Bearings shall be designed for heavy-duty service with a minimum L10 life of 40,000 hours for Class I fans and 120,000 hours for Class II fans. This performance is based on the maximum operating speed of the fan's AMCA class, the operating temperature of the fan, and the horsepower. Bearings shall be heavy-duty, self-aligning pillow block type. Pillowblock bearings shall be either single row ball or double row spherical roller type. Fans shall be equipped with grease lines extending from the bearings to a point on the fan exterior.

## Belt Guard

Standard construction shall include a totally enclosed belt guard. These guards shall be solid steel sheet.

## Balancing

Wheels shall be dynamically balanced, individually to ANSI S2.19, G6.3. Assembled fans shall then be dynamically balanced using a vibration analyzer to measure velocity. The final reading shall not exceed 0.1 inches per second at the fan shaft speed. The exact level of vibration will be recorded on the fans as proof of the final dynamic balance at the factory.

## ENGINEERING SPECIFICATIONS

### Accessories

Accessories shall be provided as called for in the plans and specifications. Optional accessories include bolted access door, quick open access door, drain, variable inlet vanes with stainless steel rods, inlet companion flange, discharge companion flange, inlet screen, discharge screen, shaft seal, discharge cap, curb cap, belt tube, spark resistant construction and vibration isolators.

### Submittals

Submittals for approval of equipment shall include \_\_\_\_\_ copies of outline drawings, sound power ratings and pressure volume curves showing point of operation.

### Sound Power Levels

Manufacturer shall provide sound power ratings in the eight octave bands. Sound power levels shall be based on AMCA Standard 301. Sound power ratings shall be in decibels, referenced to  $10^{-12}$  watts.

### General Construction

Housings shall be of heavy gauge steel, structurally reinforced and suitably braced to prevent vibration or pulsation, and shall be arc welded throughout. Lifting lugs shall be welded to the housing to facilitate handling of the fans. Straightening vanes shall be standard construction to assure maximum efficiency and lowest noise levels.
