Features

Housing is made of galvanised steel

Backward-curved impeller is made of high-grade cold-rolled steel

Inlet cones are fitted to side plates

Designed to achieve highly aerodynamic inlet conditions

Frames for S version are made of galvanised angled iron

H version has additional steel plates welded to angled iron frames for enhanced rigidity and strength

HS version uses thicker gauge materials

Fan shaft is made of carbon steel and coated to resist corrosion

Bearings are of high quality to minimise fan noise

High efficiency & low power consumption

Outlet flange and thermal protection for motors are available upon request

Construction

Scroll is joint to the side plates through spot welds or Pittsburgh seam

Impellers are welded using high precision machine and balanced to ANSI/AMCA 204-05

Shafts undergo stress relief and heat treatment process and are designed to operate at 1.4 times the fan maximum running speed

Frames for H and HS version are finished in polyester coating

Bearings are either sealed and maintenance free or have lubrication fittings

Can be built to suit one of the four discharge positions

Total Efficiency	$\eta_F=75.4\%$

The power (Psh) on the performance chart refers to the shaft power of the fan.
The rated power of the drive motor equals the total required shaft input multiplied by the safety factor : $P_{sh.p}=P_{sh} \times K + \eta_{me}$
The value of mechanical drive efficiency can be obtained from Table 1.
The required safety factors is provided in Table 2.

(Table 1)

Drive Type	η_{me}
