STL

>> The sand trap louver is made of aluminum section/ GI sheet. It is composed of two sets of inverted U-channels, mounted vertically on two opposite rows.

>> The sand trap louver is used at the fresh air inlet. It can lower the dust loading of conventional filtration as it is designed to separate large size sand particles at low to medium speeds. It can be fitted with a bird/insect screen mesh.

>> The sand trap louver is a self emptying system, it has a set of holes at the bottom of the casing to discharge separated sand particles.

>> Tested by AMCA in accordance with ANSI/ AMCA 500-L

Beta Industrial LLC certifies that the STL shown hereon is licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 511 and comply with the requirements of the AMCA Certified Ratings Program.

The AMCA Certified Ratings Seal applies to Air Performance and Wind Driven Sand.

Test Information

Tested in accordance with ANSI/AMCA 500-L, Figure 5.5 Test sample size is 1219mm x 1219mm (48 in. x 48 in.) Air Performance data are based on exhaust performance

The sand grading used for the test is between 76 μ m - 699 μ m as per AMCA 500-L.

WATER PENETRATION DATA

— Water Penetration of EAL4

✱ Beginning of Water Penetration

>> The gravity air louver is a wall mounted device. It is composed of a set of horizontally mounted blades; they are normally closed and are free to rotate about the horizontal axis.

>> The blades & frame are manufactured from aluminum extruded profiles.

>> Horizontally mounted blades are available with bushes.

>> Free area ratio (approx.) = 0.82 for 100% open blades.

>> To calculate the air flow rate :

$$CFM = \frac{0.82 \times A \text{ (in"} \times B \text{ (in"} \times \text{Face velocity (fpm)}}{144}$$

$$L/S = \frac{0.82 \times A \text{ (mm)} \times B \text{ (mm)} \times \text{Face velocity (m/s)}}{1000}$$
