

# SD60

Galvanized | Airfoil Blade Smoke Damper  
UL555S Leakage Class I Classified

## APPLICATION

The SD60 is an ultra low leakage rated smoke damper used in ducts that penetrate smoke rated barriers. The high strength onepiece airfoil blades insure lowest resistance to airflow with velocities up to 4000 fpm (20.3 m/s) and 8 in w.g. (2 kPa). The SD60 may be installed vertically (with blades running horizontal) or horizontally and is rated for airflow and leakage in either direction.

## AMCA LICENSED AIR PERFORMANCE DATA

**Pressure Drop Data** SD60 air performance testing is performed in accordance with AMCA Standard 500-D configuration 5.3 as illustrated below. All data are corrected to standard air density of .075 lb/ft<sup>3</sup> (1.201 kg/m<sup>3</sup>).

Ruskin Thailand Co. Ltd. certifies that the SD60 shown herein is licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 511 and comply with the requirements of the AMCA Certified Ratings Program. The AMCA International Certified Ratings Seal applies to Air Performance and Air Leakage

**AMCA Figure 5.3** was established to represent a fully ducted damper with straight duct upstream and downstream. With entrance and exit losses minimized by this straight duct arrangement, this configuration has the lowest pressure drop of all three configurations.

### To determine the AMCA Licensed air performance:

Locate the applicable feet per minute face velocity on the bottom of the velocity vs. pressure drop chart below. Move up the chart to the most appropriate size damper line. From the intersection point, move left to determine the pressure drop on the left side of the chart.

For other damper sizes refer to **Air Performance Data For All Smoke Dampers** spec sheet.

## EXTENDED OPERATIONAL RATINGS

The UL555S Test Standard requires all smoke dampers to prove their operation (Close to Open and Open to Close) against heated air flow with minimum temperature of 250°F (121°C), minimum velocity of 2,000 feet per minute (10.2 m/s) and minimum static pressure of 4 inches of water (1 kPa). UL555S extended ratings allow the temperature to be increased at 100°F (37.8°C), 2 inches of water (0.5 kPa) and 1000 feet per minute (5.1 m/s) increments. The SD60 smoke damper exceeds the minimum UL555S requirements on selected sizes. See chart for sizes and ratings. **Consult Ruskin for the appropriate actuator model and quantities.**
