

## Technical Description

Adjustable blade angel, self flanged axial duct type van axial fan .  
The fans available for smoke exhaust , certified as F300, F400  
complying with EN12101-3, Notified body 1812.

Between 315-1600 mm diameter, up to 210.000 m3/h air flow rate

Multi Vane section designed to serve as static regain device to  
ensure maximum efficiency in converting the velocity pressure to  
static pressure with minimum turbulence as optinonal

The function (optional ) of the guide vanes is to improve the  
efficiency and the pressure characteristics by converting  
rotational energy at the propeller discharge into useful work.

## Casings

Casing is made of hot-dip galvanized steel and long cased type including terminal box in standard production. According to the requirements, casing can be electrostatic paint coated.

## Impellers

Axial impellers are balanced with the quality level of G 6,3 according to ISO 1940-1. Hub is made of galvanised steel and aluminium. Impellers are made of aluminum casting and the blade angles are adjustable. The impeller has to be balanced after blade adjustment. The blade angle is measured from the bottom of wing. The number of blades is variable, which expands the performance range and allows any operating point.

## Motors

3-phase IEC standard motors of type B3 with IP 55 protection class and H insulation class in 2-, 4-, 6- or 8 poles execution are used. Other design on request.

## Safety Protection

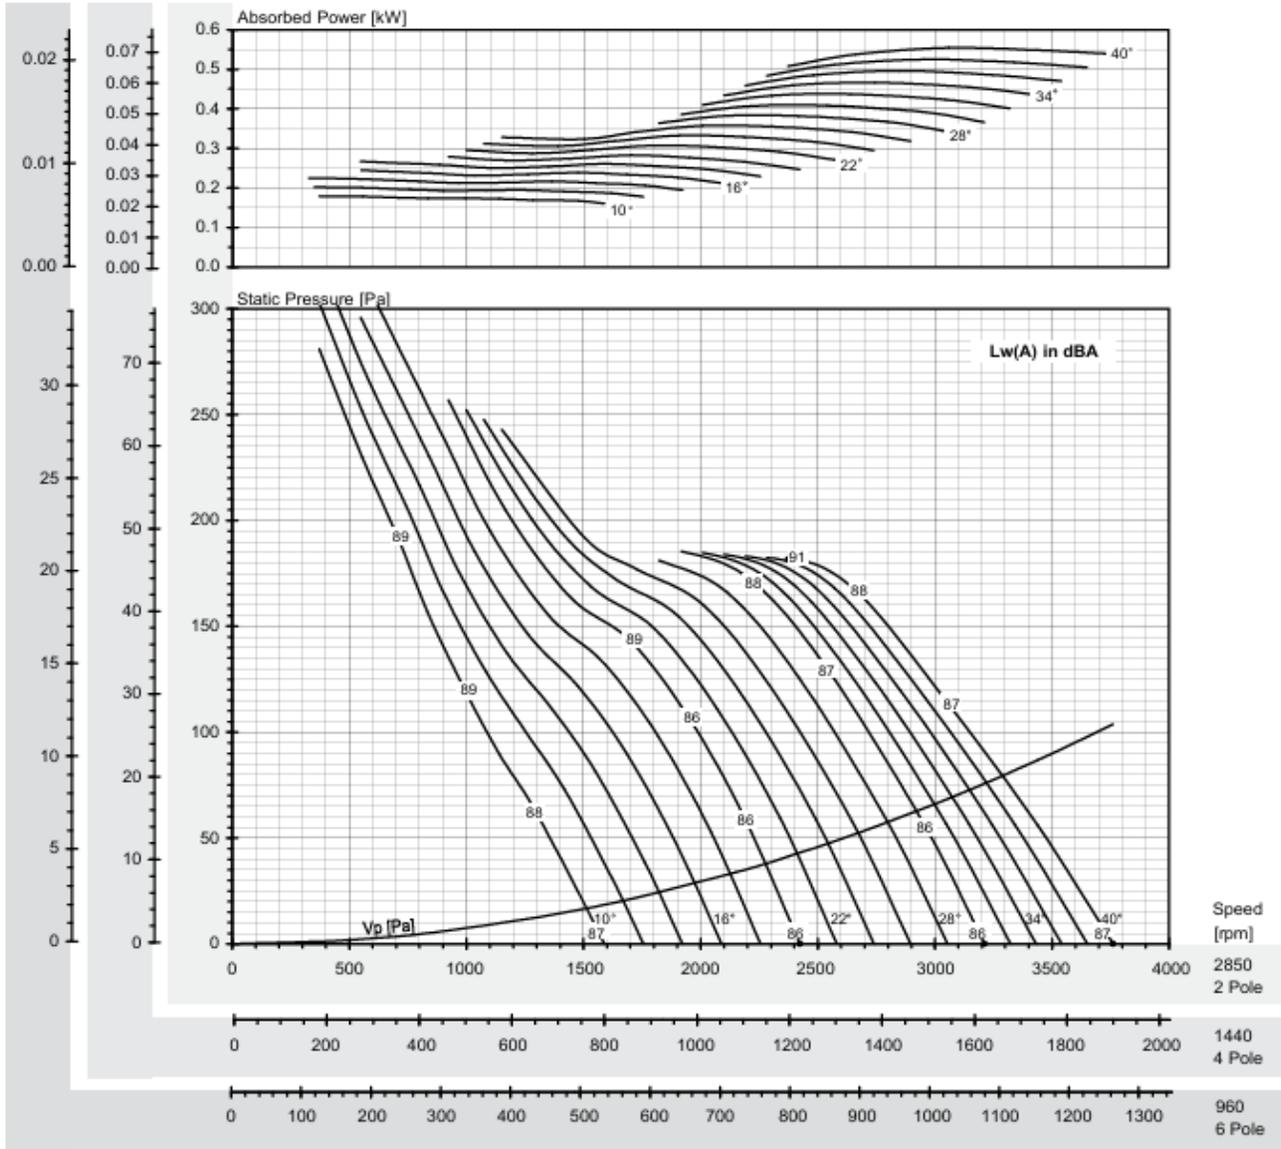

The fans are designed for installation in ventilation system and therefore supplied without protection guard in standard. The user has to be sure before initial operation that safety protection is ensured according to EN 12100-1 / 2.

\* The actual dimension is subject to the motor frame size used, kindly refer to GTG Technical Submittal for further details.  
 \* Weight indicated above excluded the weight of motor, hub and fan blades.
