

The KPS 4DL - Low Profile Frame louver is a 4" (102 mm) deep, extruded aluminum, drainable stationary louver designed to maintain intake and exhaust performance while resisting water infiltration. It provides protection against general weather conditions while providing a high free area. The units install easily in most common wall configurations. The blade design effectively captures run-off water at the guttered front end. The vertical jamb extrusion is a low profile plate that minimizes the appearance of a vertical frame.
