Description

Working towards perfection

The ADY series

This fan range employs housings with square-shaped outlet and sizes from the R20 normal number series, in accordance to AMCA Standard 99-0098 76 and to ISO 497-1973.

The ADY range is made of double width, double inlet centrifugal fans.

Volume flow rate from 450 m³/h to 240.000 m³/h

Total pressure up to 2500 Pa.

Construction versions

ADY fans are available in the following versions:

Version	L	R	K	K1	K2
Sizes	0160/-0710	0160/-0710	0200/-1000	0315/-0900	0500/-1000

Twin fan versions

Where a limited fan height is required, ADY fans are available also in double or twin fan versions, with two double inlet impellers on a common shaft, supported by three or four bearings. These versions are identified by the G2 prefix. Double fans are available in the following sizes:

Version	G2L	G2R	G2K	G2K2
Sizes	0160/-0500	0160/-0630	0250/-1000	0250/-1000

Construction Specifications

The construction standard used for Nicotra Gebhardt ADY fans is inspired to the maximum strength and reliability, independently from the construction version.

Common characteristics of these products are:

- product quality
- high performance
- outmost economy
- quietness
- ease of assembly

Scrolls

All the scrolls are made with hot dip galvanised steel EN 10142. No electrical spot welding is used as the scroll back is joined to the side plates with the Pittsburgh lock forming system. This prevents any oxidation starting from the welding spots.

Attachment points on the side plates

Standard holes in the side plates are used to attach mounting feet or side frames to create different versions. Up to size 400, self-threading screws are used, while all the larger sizes have captive nuts for use with M10 screws.

Impellers

ADY impellers have specially-designed Tab-lock forward curved blades, built from cold-formed, galvanised steel "Sendzimir". ADY impellers are statically and dynamically balanced according to ISO 1940 with grade G4.

Side frames

Light-construction side frames of the R and G2R versions are made with coldformed, galvanised steel "Sendzimir" type EN 10142. Heavy-duty side frames of the K, K1, K2, 2K and G2K2 versions are made with hot-rolled steel sections, welded and coated with alchidic-melamminic paint RAL 7030. As an option, they can be protected with hot dip galvanising.

Shafts

Manufactured from precision ground, C45 carbon steel bars, using precision tools to cut keyways. All the shafts are coated, after assembly, with a clearly distinguishable, bright yellow protective paint. Stainless steel shafts can be provided on request. Shaft diameters are selected to achieve a safety factor for critical speed ≥ 1.25 higher than the maximum operating speed.

Coefficients for calculation of noise ratings

The following tables show, for each fan size, the coefficients required to estimate sufficiently approximate values of those Sound Power Levels which cannot be directly read on the operating diagrams. These coefficients are given on three different similarity curves and at three different operating speeds. Those coefficients marked with "SX" apply to operating points located on the left border of the normal operating area (blue diagonal line on the left). The coefficients marked with "DX" apply to operating points located on the right border of the normal operating area (blue diagonal line on the right). Those coefficients marked with "EtaTMax" apply to operating points located on the maximum efficiency operating line.

It is preferable to interpolate between the listed coefficients when referring to the operating points between the listed speeds or operating lines.

The Ventil selection program applies the complete calculation procedure, in accordance with BS 848 Part 2, Appendix G, and provides easily the best approximation of the results.
