### Computer Aided Product Selection Program – CAPS

All Greenheck products are supported by the industry's best product literature, electronic media, and Computer

Aided Product Selection program, CAPS. Online, you can also find electronic copies of our product literature as well as storage, installation and maintenance information in our Installation and Operation Manuals.

And, of course, you can always count on the personal service and expertise of our national and international representative organization. To locate your nearest Greenheck representative call 715-359-6171 or visit our Web site at [www.greenheck.com](http://www.greenheck.com)

### To-Scale Drawings and Fan Specifications

To-scale CAD drawings along with detailed centrifugal specifications can be found online at [greenheck.com](http://greenheck.com) or within our Computer Aided Product Selection program (CAPS).

Greenheck certifies that the Industrial Process Fans shown herein are licensed to bear the AMCA Seal.

The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program.

## Motor Selection

Greenheck industrial process fans can be supplied with any motor that is commercially available and is appropriate for the fan size and performance required. The table shows motor frame sizes corresponding to those motors readily available. See the maximum motor frame size chart below if motor is for arrangement 9 or 10 fans.

- Notes:
1. Fractional horsepower motor frame sizes shown may change due to variations in voltage, special features and manufacturer.
  2. Motors shown are ball bearing, continuous duty. Two speed motors are two winding, 1/3 reduction in RPM.
  3. Single phase motors are capacitor start.
  4. Open frame motors have a 1.15 service factor. TE motors have a 1.0 service factor.

\*Single speed three phase motors of 200 volts are available up to 100 horsepower, 230 volts up to 125 horsepower and 460 or 575 volts up to 150 horsepower.

\*\*Two speed three phase motors of 200 volts are available up to 10 horsepower, 230 volts up to 10 horsepower and 460 or 575 volts up to 25 horsepower.

# Engineering Data

## Motor Starting Torque

When selecting a motor for an industrial process fan, the motor must be capable not only of driving the fan at operating speed, but also must be capable of accelerating the fan wheel, shaft and drive to the operating speed.

The fan performance tables and curves in this catalog show the brake horsepower required to operate the fan once it is brought to speed. For applications requiring a large air volume at a low static pressure, the Bhp required at the fan's operating RPM may not be sufficient to initially start the fan. If the time required to bring the fan to speed is excessive, the motor winding insulation can be damaged due to excessive temperature rise and the life of the motor seriously affected.

For a belt drive industrial process fan the required motor starting torque capability can be expressed by the following formula:

$$WR_M^2 = WR_F^2 \times \left( \frac{FRPM}{MRPM} \right)^2 \times (1.1)$$

$WR_M^2$  = The moment of inertia that the motor must be capable of turning at the motor shaft, lb-ft<sup>2</sup>

$WR_F^2$  = The moment of inertia of the fan wheel, lb-ft<sup>2</sup>

FRPM = Fan RPM

MRPM = Motor RPM

## V-Belt Drives

### Constant Speed Drives

Advantages of constant speed drives include low vibration levels, ease of assembly and low cost. Fan speed changes can be accomplished in most cases simply by changing the motor pulley.

Constant speed drives are recommended over variable speed drives for applications that require motors 15 HP and larger, and all applications requiring 3600 RPM motors.

### Variable Speed Drives

Variable speed drives allow the fan speed to be changed by adjusting the pitch diameter of the motor pulley. The power to the fan must be off and locked out, and the belts must be removed before manually adjusting the variable pitch pulley.

## High Temperature Operating Limits

Temperature	Material	Arrangement	Options Included
-20 to 250°F	Steel Aluminum Stainless Steel	1, 4, 8, 9 and 10	Standard operating range for industrial process fans

## Fan RPM Limitations

The maximum allowable wheel RPM shown on the fan performance pages are for fans of standard steel operating at 70°F. Since the strength of the fan wheel, shaft and bearings decreases with an increase in temperature, maximum allowable speeds must be reduced by the correction factors shown below.

Maximum RPM Correction Factors For High Temperatures			
Temperature (°F)	Wheel Material		
	Aluminum	Steel	316 SS
70	1.00	1.00	1.00
200	1.00	.97	.92
250	.95	.96	.89
300		.95	.87
400		.93	.83
500		.90	.80
600		.85	.77
700		.80	.75
800		.72	.72
900			.71
1000			.69

## Effect of Air Density

Ratings in the fan performance tables and curves of this catalog are based on standard air (clean, dry air with a density of 0.075 pounds per cubic foot, barometric pressure at sea level of 406.75 inches wg, temperature of 70°F.). Selecting a fan to operate at conditions other than standard air requires an adjustment to both static pressure and brake horsepower.

One cubic foot of air has a constant volume regardless of temperature or elevation. However, air density changes with non-standard temperature or elevation. Therefore, when selecting a fan to operate at a non-standard air density using standard air density tables and curves, corrections must be made to parameters affected by air density. These parameters are static pressure and brake horsepower.

For example, a size 26 IPO industrial fan is to deliver 15,000 cfm at 16 inches static pressure. Elevation is 2000 feet, temperature is 400°F.

The 16 inches static pressure refers to the static pressure at the operating air density, in this case at 2000 feet, 400°F. Intuitively, we realize that at higher than standard elevations and temperatures, air density will be lower than standard. Therefore, we must determine what static pressure at standard air density will equate to 16 inches static pressure at our operating density. Since standard air density is greater than operating air density in this case, we would expect the corrected static pressure to be greater than the operating static pressure.

Dry Air Density Correction Factor (I-P)													
Multiply Standard Air Density, 0.075 lb <sub>m</sub> /ft <sup>3</sup> by the Factor to obtain Density at Condition p <sub>b</sub>													
Altitude, (Z)	ft.	-1000	Sea Level	1000	2000	3000	4000	5000	6000	7000	8000	9000	10000

Adapted from AMCA Standard 99-09, section 0200, Charts and Tables, with written permission from Air Movement and Control Association International, Inc.

The accompanying table gives air density correction factors for non-standard temperatures and elevations.

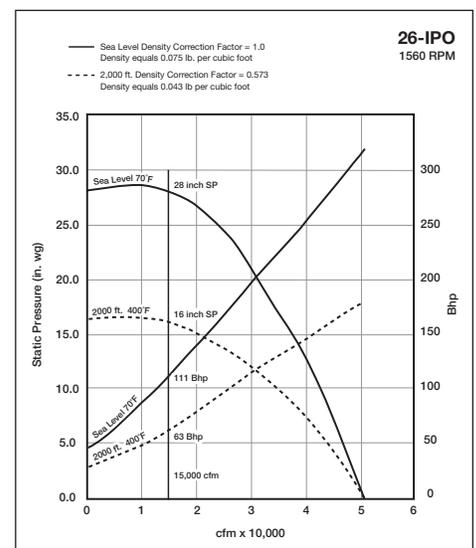

The example below shows the relationship of fan performance at sea level and at 2000 ft. elevation and 400°F.

### Example:

The following example shows how to properly select the fan described above:

1. Since the air volume delivered by the fan is not affected by density, airflow remains 15,000 cfm.
2. Determine correction factor from chart for an elevation of 2000 feet and air temperature of 400°F. The correction factor is 0.573.
3. Divide the specified operating static pressure by the correction factor to determine the standard air density equivalent static pressure. Corrected static pressure = 16 in. ÷ 0.573 correction factor = 28 in. static pressure
4. Refer to the fan performance table for a 26 IPO. At 15,000 cfm and 28 in. static pressure: Fan RPM = 1560, BHP = 111.
5. 1560 Fan RPM is required to produce the desired performance.
6. Since the horsepower selected refers to standard air density, this must be corrected to reflect actual BHP at the lighter operating air.  
Operating BHP = Standard BHP x 0.573, or 111 x 0.573 = 63.6 BHP.

If a fan is selected to operate at high temperatures, the motor must be of sufficient horsepower to handle the increased load at any lower operating temperature where the air is more dense. Assume the air entering the 26 IPO fan at start-up is 0°F. For 0°F and 2000 feet elevation the air density correction factor is 1.071. BHP at 0°F = 111 x 1.071 = 118.9, therefore, a 125 HP motor is required.

# Conveying Velocities

## Minimum Conveying Velocities for Materials

The following chart lists recommended conveying velocities for various industrial materials. The chart is intended to be used as a reference. That is, these velocities are not guaranteed to produce trouble-free operation of a material conveying system. Instead, they offer a guide as to the velocities that can be expected when conveying a particular material.

Special considerations should be made when selecting a velocity for material conveying. If the velocity in the ductwork is too high, erosion of elbows and transitions in the ductwork will likely occur. If the velocity in the ductwork is too low, the material in the airstream will not be conveyed. Instead it will settle out and cause plugging.

The nature of the material being conveyed must also be considered. A particularly corrosive material can deteriorate fan components. Long, fibrous material may wrap itself around the fan wheel and shaft and reduce fan performance. A wheel or housing that is continually bombarded by particles during operation will increase maintenance while decreasing the fan life. Proper cleaning of the fan and removal of accumulating material from the housing can prevent these problems from occurring.

## Material Conveying Velocities

Minimum Conveying Velocity			
Material	ft./min.	Material	ft./min.
Aluminum dust	4200	Limestone dust	3500
Brass turnings	4000	Malt	4800

# Direct Drive Arrangements

## Direct Drive Arrangements

Greenheck offers direct drive Industrial Process Fans in two arrangements, 4 and 8.

Arrangement 4 fans involve mounting the fan wheel directly to the motor shaft without any additional bearings to support the overhung fan wheel. For this reason, arrangement 4 fans are limited to IPO and IPW wheels in sizes 5 - 19, standard duty construction, and 11 - 19 in heavy duty construction. Fan sizes larger than 19 have wheels which are too heavy to be supported by the motor bearings alone.

Arrangement 8 fans are similar to an arrangement 1 fan in that they share the same drive pedestal which supports the overhung fan wheel with two externally mounted bearings. The arrangement 8 adds an extended motor base to allow direct coupling of the fan and motor shafts. This arrangement is available in fan sizes 5 - 41 in standard duty construction and 11 - 41 in heavy duty construction.

Dimensions for arrangement 4 and 8 fans are based on specific performance points and motor requirements. Consult the factory for submittal drawings.

Direct drive fans offer distinct advantages over belt drive fans.

Advantages of arrangement 4 fans include:

- No belts to tension or maintain.
- No external bearings to grease.
- No drives to cause horsepower loss.

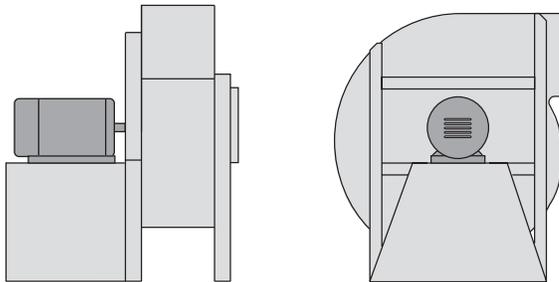

Advantages of arrangement 8 fans include:

- No belts to tension or maintain.
- No drives to cause horsepower loss.
- Shaft couplings offer high resistance to grease, dirt, oil and moisture.
- Rarely a need to remove and realign shafts of connected fans.
- Optional heat fan packages for high temperature construction up to 800° F.
- Motors can be serviced or replaced easily.

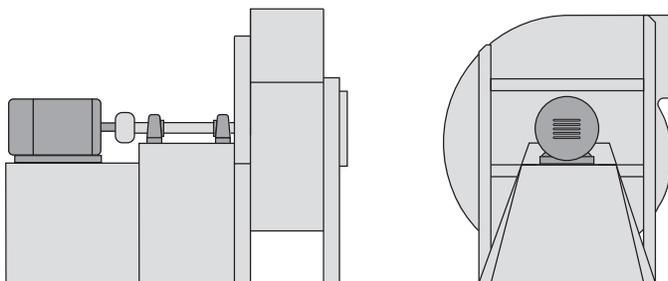

Direct drive fans require a special design for each application. One choice is to use a synchronous motor speed and a full width fan wheel. This choice offers the least expensive of direct drive options because no wheel or housing modifications are necessary. A second choice would be to use a Variable frequency drive with a full width fan wheel. Again, no modifications are made to the fan wheel or housing reducing additional engineering costs. Also, any stable operating point along the fan's operating curve is obtainable using the variable frequency drive. A third choice is to use a synchronous motor speed with a partial width fan wheel.

The following drawings show the differences between an arrangement 4 and an arrangement 8 direct drive industrial process fan.

### Arrangement 4

### Arrangement 8

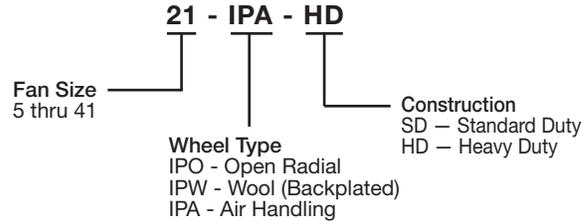

# Sample Fan Selection

The purpose of these two pages is to demonstrate the manual industrial process fan selection process. These pages also contain helpful tips to check your fan selection as well as a step by step set of instructions on how to use this manual to properly select an industrial process fan.

An important point to remember when manually selecting an industrial fan is that more than one fan is available to meet the desired performance (cfm and static pressure). Selection criteria such as unit size, efficiency, speed, outlet velocity, horsepower, or construction material may also dictate which fan is chosen.

The following example explains the model number code for industrial process fans.

- A** Industrial fans are sized and cataloged according to the diameter of the fan inlet (shown in inches) and the wheel type. O for Open Radial, W for Wool Type and A for Air Handling wheels.
- B** Wheel diameters are listed for each fan size.
- C** The Outlet Area is used to find the Outlet Velocity,  $OV = CFM/OA$ .
- D** The Minimum Starting HP is determined by the inertia ( $wr^2$ ) of the fan wheel and motor. See page 4 for a complete motor starting torque chart.
- E** The Maximum Fan RPM, Motor HP, and Motor Frame Size is listed for each fan according to duty.
- F** The most efficient performance selections for each size are highlighted with bold face type in the performance tables.
- G** Constant HP curves are plotted for each Motor HP size.
- H** The % WOV is used to identify the fan operating point. The lines in the fan curve or the equation can be used.

## A 21 IPA

- B** Wheel Diameter = 36 $\frac{1}{2}$  in.
- C** Outlet Area = 2.34 ft<sup>2</sup>  
Tip Speed = 9.56 x RPM
- D** Minimum Starting HP = 2

# Fan Selection Procedure

## STEP 1

Enter the performance table with the desired CFM and static pressure. Obtain the fan RPM, operating BHP and duty.

EXAMPLE: For this example we will use 8600 CFM at 9.0 in. wg. This gives us a fan RPM of 1153 requiring 17.6 BHP, in standard duty construction.

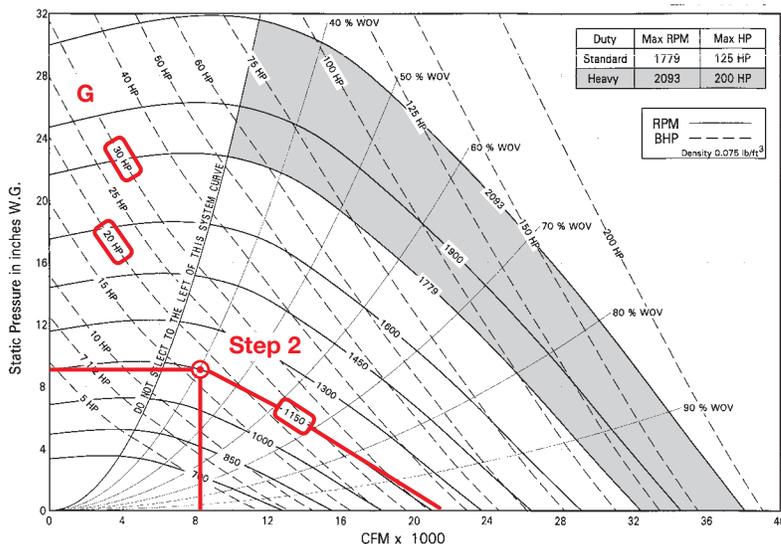

NOTE: The motor size can be compared to the maximum motor frame size table found at the top of the performance table. Motor frame sizes are based on fan arrangement.

## STEP 2

Enter the fan curve with the desired CFM and static pressure. Obtain the fan operating point, % WOV, operating HP, free air HP and verify fan duty using the curve shading.

EXAMPLE: For this example the fan operating point is at 41% WOV using a 20 HP motor. The free air HP is 30 and can be found by following the fan RPM curve down to 0 in. static pressure.

NOTE: The free air HP for industrial fans must be considered because the wheels have overloading characteristics. This means the required motor horsepower increases as static pressure decreases.

21 IPA

## STEP 3

Enter the fan sound table with the fan RPM from the performance table and the % WOV from the fan curve. Obtain the eight octave ratings for inlet ( $L_{wi}$ ) and outlet ( $L_{wo}$ ) sound power.

EXAMPLE: For this example, the eight octave ratings are circled in the fan sound table.

NOTE: The exact % WOV for your desired performance point can be found using the equation at the top of the fan sound table if it is not published. The eight octave ratings can then be found using interpolation.

$$H \text{ \% WOV} = (\text{CFM} \times 100) / (\text{RPM} \times 18.2)$$

## Sound Power [dB Ref 10<sup>-12</sup> watts]

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 5 IPO

Wheel Diameter = 8¾ in.

Outlet Area = 0.12 ft<sup>2</sup>

Tip Speed = 2.29 x RPM

Minimum Starting HP = ¼

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 21 IPO

Wheel Diameter = 36½ in.

Outlet Area = 2.34 ft<sup>2</sup>

Tip Speed = 9.56 x RPM

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 23 IPO

Wheel Diameter = 40 in.

Outlet Area = 2.8 ft<sup>2</sup>

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 41 IPO

Wheel Diameter = 71¼ in.  
 Outlet Area = 9.09 ft<sup>2</sup>  
 Tip Speed = 18.65 x RPM  
 Minimum Starting HP = 40

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 5 IPW

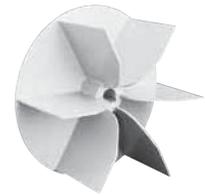

Wheel Diameter = 8¾ in.

Outlet Area = 0.12 ft<sup>2</sup>

Tip Speed = 2.29 x RPM

Minimum Starting HP = ¼

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 15 IPW

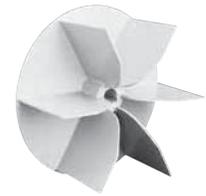

Wheel Diameter = 26<sup>1</sup>/<sub>8</sub> in.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 17 IPW

Wheel Diameter = 29<sup>5</sup>/<sub>8</sub> in.  
 Outlet Area = 1.56 ft<sup>2</sup>  
 Tip Speed = 7.76 x RPM  
 Minimum Starting HP = 1

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 19 IPW

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 21 IPW

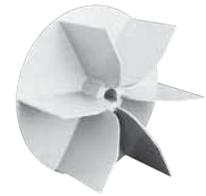

Wheel Diameter = 36½ in.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 33 IPW

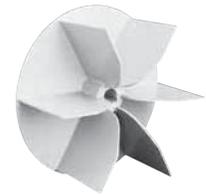

Wheel Diameter = 57½ in.

Outlet Area = 5.87 ft²

Tip Speed = 15.05 x RPM

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 19 IPA

Wheel Diameter = 33 in.

Outlet Area = 1.94 ft<sup>2</sup>

Tip Speed = 8.64 x RPM

Minimum Starting HP = 2

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 21 IPA

Wheel Diameter = 36½ in.  
 Outlet Area = 2.34 ft²  
 Tip Speed = 9.56 x RPM

Performance certified is for model IPA arrangement 1, installation type D - ducted inlet, ducted outlet. Power rating (Bhp) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories).

$\% \text{ WOV} = (\text{CFM} \times 100) / (\text{RPM} \times 18.2)$

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 29 IPA

Wheel Diameter = 50½ in.

Outlet Area = 4.54 ft²

Tip Speed = 13.22 x RPM

Minimum Starting HP = 15

Performance certified is for model IPA arrangement 1, installation type D - ducted inlet, ducted outlet. Power rating (Bhp) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories).

$\% \text{ WOV} = (\text{CFM} \times 100) / (\text{RPM} \times 48.2)$

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 33 IPA

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 37 IPA

Wheel Diameter = 64<sup>3</sup>/<sub>8</sub> in.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# 41 IPA

Wheel Diameter = 71¼ in.

The sound power level ratings shown are in decibels, referred to 10<sup>-12</sup> watts calculated per AMCA Standard 301. Values shown are for inlet  $L_{wi}$ ,  $L_{wiA}$  and outlet  $L_{wo}$ ,  $L_{woA}$  sound power levels for installation type D: ducted inlet, ducted outlet. Ratings include the effects of duct end correction. The AMCA Certified Ratings Seal applies to air performance ratings only.

# Dimensional Data

Data shown on these pages is for general information only and should not be used for exact installation dimensions. All columns are rounded to the nearest 1/8 inch. For detailed dimensional data refer to the appropriate submittal drawing. All dimensional drawings represent clockwise rotation. Counterclockwise would be a mirror image and would not affect dimensions. Rotation is determined from the drive side of the unit.

Due to Greenheck's policy of continuous product improvement, dimensions are subject to change. For complete dimensional information refer to the applicable CAPS submittal drawing.

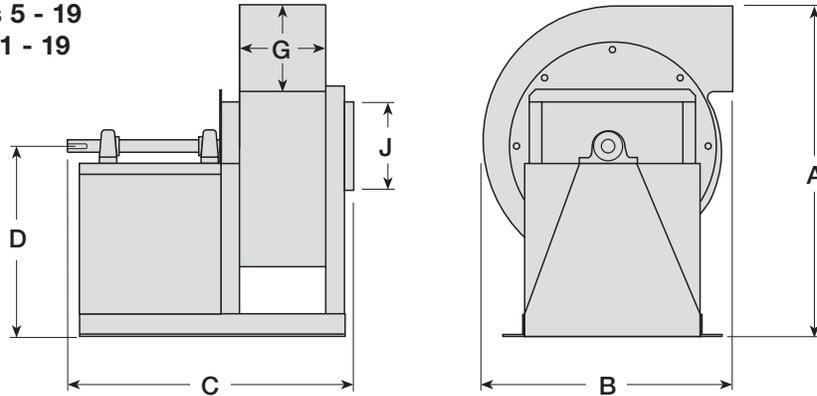

## Angular Discharge Dimensions

# Dimensional Data

Data shown on these pages is for general information only and should not be used for exact installation dimensions. All columns are rounded to the nearest 1/8 inch. For detailed dimensional data refer to the appropriate submittal drawing. All dimensional drawings represent clockwise rotation. Counterclockwise would be a mirror image and would not affect dimensions. Rotation is determined from the drive side of the unit.

## Arrangement 1 and 9 Standard Duty Sizes 21 - 41 Heavy Duty Sizes 21 - 41

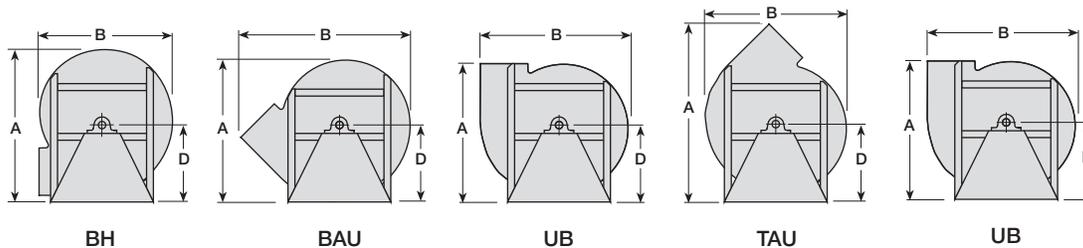

Clockwise Top Horizontal (TH) discharge shown above
