Greenheck Fan Corporation certifies that the Models G and GB fans shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and Publication 311 and comply with the requirements of the AMCA Certified Ratings Program. The certified ratings for Models G and GB are shown on pages 15 - 47

G and GB models are listed for electrical (UL/cUL 705) File no. E40001
GB models for Emergency Smoke Control Systems (UL/cUL Listed for 500°F (260°C) for 4 hours and 1,000°F (538°C) for 15 minutes) File no. MH17511

****UL/cUL is optional
and must be specified***

Enjoy Greenheck's extraordinary service, before, during and after the sale.

Greenheck offers added value to our wide selection of top performing, energy-efficient products by providing several unique Greenheck service programs.

- Our Quick Delivery program ensures shipment of our in-stock products within 24 hours of placing your order. Our Quick Build made-to-order products can be produced in 1-3-5-10-15-20 or 25-day production cycles, depending upon their complexity.
- eCAPS® online selection guides you to choose the best value product for your building projects. It includes fan, louver and dedicated outdoor air systems (DOAS) selection, as well as a damper guide and toolbox.
- Greenheck's free Computer Aided Product Selection (CAPS®) program, rated by many as the best in the industry, helps you conveniently and efficiently select the right products for the challenge at hand.
- Our 3D service allows you to download, at no charge, easy-to-use AutoDesk® Revit® 3D drawings for many of our ventilation products.

Find out more about these special Greenheck services at greenheck.com

G	✓		✓					✓				✓		✓			✓			✓	✓			14,500	2.75
GB	✓		✓					✓				✓		✓		✓	✓		✓		✓			44,700	3.25

* Smoke control available on models: 100, 100HP, 120, 130, 140, 140HP, 160, 160HP, 200, 240, 300, 360, 420 and 480

** High wind limited to sizes 300 and smaller

Greenheck models G and GB centrifugal roof exhaust fans provide the industry's best performance and durability for general clean air applications where air is discharged downward, toward the roof surface.

- Broadest performance in the industry, up to 3.25 in. wg (810 Pa) and 44,700 cfm (75,945 m³/hr).
- Most advanced motor cooling of any fan in its class.
- Performance as cataloged is ensured. All fan sizes are tested in our AMCA accredited laboratory, and all models are licensed to bear the AMCA Sound and Air Performance seals.
- UL Listed for electrical.
- Greenheck subjects these products to extensive life testing ensuring the fans will provide years of reliable performance.

Direct Drive, G

- Use for short and/or low resistance ductwork

Belt Drive, GB

- For average length and/or average resistance ductwork
- High volume/average pressure

High Pressure, G-HP and GB-HP

- For long and/or high resistance ductwork
- Low volume/high pressure

Standard Construction Features

1	Wheel	A backward-inclined, non-overloading centrifugal wheel is utilized to generate high-efficiency and minimal sound. Wheel cones are carefully matched to the venturi for maximum efficiency. Each wheel is robotically welded and statically and dynamically balanced for long life and quiet operation.
2	Disconnect Switch	NEMA-1 switch is factory-mounted and wiring is provided from the motor as standard (other switches are available). All wiring and electrical components comply with the National Electrical Code® (NEC) and are either UL Listed or Recognized.
3	Fan Shaft	Precisely sized, ground and polished, so the first critical speed is at least 25% over the maximum operating speed. Where the shaft makes contact with bearings, tight tolerances result in longer bearing life.
4	Bearings	100% factory tested and designed specifically for air handling applications with a minimum L ₁₀ life in excess of 100,000 hours (L ₅₀ life of 500,000 hours).
5	Motor	Carefully matched to the fan load and mounted out of the airstream.
6	Motor Cover	Constructed of aluminum and attached with fasteners for easy removal and access to motor compartment and drive assembly.
7	Motor Cooling	Cooling fins located on top of the fan wheel draw outside air through a large space between the fan shroud and the motor cover directly into the motor compartment. Positive motor cooling with fresh air results in maximum motor life.
8	Lifting Points	Various lifting points are located on the drive frame and bearing plate (on select sizes).
9	True Vibration Isolation	Vibration isolators, with no metal-to-metal contact, support the drive assembly and wheel for long life and quiet operation.
10	Drive Assembly	Belts, pulleys, and keys are oversized 150% of driven horsepower. Machined-cast pulleys are adjustable for final system balancing. Belts are static-free and oil-resistant.
11	Lower Windband	Heavy-gauge aluminum with formed edges for added strength and provides weather resistance.
12	Curb Cap	Curb cap (with integral deep spun venturi) is constructed of aluminum and is one-piece for a weather-tight fit.
Not Shown	Internal Conduit Chase	A large diameter conduit for installing electrical wiring through the curb cap into the motor compartment.
13	Nameplate	Permanent embossed aluminum plate for exact model and serial number identification.
14	Galvanized Birdscreen	Rigid wire protects the fan discharge from birds and small objects.
15	Fan Shroud	One-piece, heavy-gauge aluminum with a rolled bead for extra strength directs exhaust air downward.
16	Mounting Holes	Curb cap has prepunched mounting holes to ensure correct attachment to the roof.

High Wind Construction Features

17	Internal Supports	Heavy-gauge supports and bracing are added for additional strength to withstand a load of 75 psf.
18	Reinforced Windband	High wind fans include additional reinforcement for maximum strength.
	Roof Curb (page 11)	High wind-load fans are certified for use with Greenheck model GPFHL, GPFHD, GPF or equivalent in high wind applications. Roof curbs ship separate for field installation with attachment details provided.

Emergency Smoke Control - GB

When you buy a Greenheck model GB with the smoke control option, you receive a fan with the industry's best performance and durability for smoke control applications (as found in emergency smoke control systems).

GB smoke control models are:
100, 100HP, 120, 130, 140, 140HP,
160, 160HP, 200, 240, 300, 360,
420, 480

- UL/cUL Listed for 500°F (260°C) for 4 hours and 1,000°F (538°C) for 15 minutes.
- Half the weight of traditional smoke control fans, ideal choice for roof load concerns.
- Low profile, height is less than half of traditional smoke control fans, maximum of 52½ inches (1334 mm) from curb cap to top of the fan.
- Multiple applications, capable of exhausting general clean air and satisfying emergency smoke control regulations.

Seismic - G and GB

With changes in building codes and standards, more equipment is being required to be seismically certified in areas of the country not commonly thought of as being in seismically active zones.

The International Building Code (IBC) is designed to provide model code regulations that safeguard public health and safety in all U.S. communities. This code is intended to improve the performance and design of nonstructural systems subject to seismic events.

The State of California, one of the most active seismic areas in the United States, has the Office of Statewide Health Planning and Development (OSHPD) to regulate the design and construction of health care facilities to ensure they are safe and capable of providing services to the public after a seismic event.

OSHPD developed their own unique certification process to incorporate the IBC and ASCE testing standards to ensure equipment remains operable after a seismic event.

Note: All G and GB models meet seismic requirements.

Protocols designed for seismic standards:

Seismic Testing Criteria

All Greenheck seismically certified models have been tested using the most severe seismic event that is found on the Spectral Response Map per IBC Figures 1613.5 (1-2). Our testing is performed under the worst case scenario using the highest mapped seismic load, highest level occupancy category, worst case site class, and highest code mandated importance factor, thereby allowing Greenheck's seismically certified fans to be used anywhere in the United States under any conditions.

California OSHPD Test Protocols

The California Office of Statewide Health Planning and Development (OSHPD) requires all certified models be shake table tested in accordance with ICC ES AC-156, in which the fans are physically subjected to the same or greater forces than they will see during a seismic event. Subjecting Greenheck model G and GB fans to this type of testing ensures the fans will operate without problems after a seismic event.

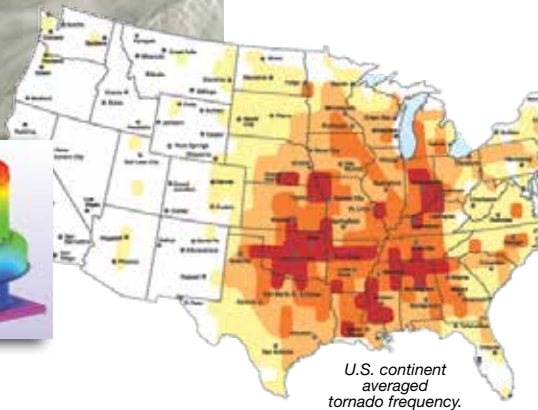

OSHPD Certification

The OSHPD certification numbers and supporting documents can be viewed on OSHPD's website ensuring that the fan has been subjected to and passed rigorous testing standards.

High Wind and Hurricane - G and GB

Greenheck is leading the High Wind Standard for roof top fans and ventilators. Forceful winds and wind-borne debris are the cause of most hurricane damage. Hurricane winds start at 75 mph and can exert a force of 75 pounds per square foot of pressure—or over 900 pounds on a fan and curb. Forceful winds are not the only problem; wind-borne debris can also cause detrimental effects to objects and structures. High winds and extreme forces are the cause of most storm damage. By analyzing calculations, computer simulations, actual testing, and other standards—Greenheck developed the High Wind Standard.

Atlantic, Gulf and Pacific history of major hurricane tracks.

Protocols designed to protect against wind-borne debris and severe wind-loads:

Structural Performance Load

A static load that is 1.5 times the design load (91.5 pounds per square foot of pressure) is applied both positively and negatively to simulate wind force loads in each direction. Structural Performance per Dade County Protocol TAS-202 (ASTM-E330).

Miami-Dade NOA Numbers

View the certifications on the Miami-Dade County website. Models G and GB are the first downblast aluminum fans in the industry to have received a Miami-Dade NOA for high wind and hurricane zones.

Florida Product Approval

Florida Product Approval ensures approved products can be used anywhere in the State of Florida which are not governed by the Miami-Dade County high wind regulations. More information is available on the Florida Building Code website. Florida Product Approval FL13225.1 for models G and GB.

Model G VARI-GREEN® Motor

Greenheck's electronically commutated (EC) Vari-Green (VG) motor is the industry's first fully controllable motor. It combines motor technology, controllability and energy-efficiency into a single low-maintenance unit. When combined with Greenheck fans, all the CFM and static pressure ranges of a belt drive can be attained with the benefits of a direct drive.

Motor Information			
HP	Voltages	Phase	Enclosure
1/15	115, 208-230	1	TENV
1/10	115, 208-230, 277	1	TENV
1/10	115, 208-230, 277	1	ODP
1/6	115, 208-230, 277	1	TENV
1/6	115, 208-230, 277	1	ODP
1/4	115, 208-230, 277	1	ODP
1/2	115, 208-230, 277	1	ODP
3/4	115, 208-230, 277	1	ODP
1	115, 208-230, 277	1	ODP
1	115, 208-230, 277	1	TENV
1	115, 208-230	1	TEFC
1	208-240, 380-480	3	TEFC
2	208-230	1	TEFC
2	208-240, 380-480	3	TEFC
3	208-230	1	TEFC
3	208-240, 380-480	3	TEFC
5	208-240, 380-480	3	TEFC
7 1/2	380-480	3	TEFC
10	380-480	3	TEFC

Benefits

- The Vari-Green motor can attain up to IE5 efficiency ratings and reduce energy consumption.
- Watt savings of 30-70% depending on RPM.
Note: As motor speed is turned down, efficiency stays high as compared to an AC motor that decreases dramatically.
- Operates cooler than a standard AC motor at lower RPMs. A cooler motor has longer motor life and reduces energy consumption.
- 75% usable RPM turndown versus 30%, see Motor Turndown Comparison chart at right.
- G fans with Vari-Green motors can provide all the CFM and static pressure ranges of a comparable belt drive.
- Maintenance costs are reduced as there are no belts or bearings to replace and no pulleys to adjust.
- Direct drive fans are often preferred where maintenance access is difficult.
- Provides a solution for demand-controlled ventilation applications.

Features

- Dial on Motor Control** - a potentiometer (dial on motor control) is mounted on the motor for easy speed adjustment for system balance. Simply turn the dial. There are no belts and pulleys to adjust.
- Control Wire Inputs** - the motor accepts a 0-10V DC signal from Building Automated Systems or other controls to adjust motor speed.

Vari-Green Advantages

- Initial cost is similar to a belt drive
- Lower operating cost
- No maintenance: no belts, pulleys or bearings
- Easy RPM adjustment

Comparisons: Belt, Direct Drive with PSC and Direct Drive with Vari-Green

Constant Volume Life Cycle Analysis

Analysis is based on operating costs for a period of three years where the fans operate continuously at 1725 rpm, 24/7, with an energy rate of \$0.10/kWh. Maintenance on the GB-120 is estimated at \$65/yr.

Note: Example is based on a relative cost. Use and installation variables may produce different results.

Demand Control Ventilation for Multistory Buildings

Applications requiring constant pressure or variable volume can utilize G fans with Vari-Green motors and Vari-Green controls. Demand control ventilation systems reduce the amount of energy used by decreasing the speed of the fan when demand is low. This lessens the amount of conditioned air exhausted, and in turn, reduces the total operating costs associated with air conditioning and heating in multistoried buildings including hotels, multifamily complexes, institutional facilities, and high-rise commercial buildings.

Variable Volume Operating Cost Analysis

Example of potential savings based on a northeast city in the USA using Vari-Green components for variable volume.

The Vari-Green constant pressure control is preprogrammed and easy to install for applications that include venting dryers, bathrooms, residential-type kitchen space, or industrial process exhaust.

Daily Operating Comparison: Variable Volume and Constant Volume

Note: A standard VFD compatible motor can also function within a Variable Volume system.

Vari-Green® Controls

Transformer - Provides 24V power from the existing line voltage at the fan to the Vari-Green motor and controls. Dual voltage primary (120/240V) transformer provided with the fan.

Remote Dial - Allows for remote, manual airflow adjustments. Wall plate with dial may be mounted in a standard 2x4 inch electrical junction box.

Two-Speed Control - Control allows motor RPM to be set at two independent speeds (high or low). Meets minimum airflow requirements with the ability to bump up to high speed in an emergency or meet maximum airflow requirements, or reset down to low speed for energy conservation.

Constant Pressure Control - Control the Vari-Green® motor via static (variable volume) or velocity (constant CFM) pressure on the inlet or outlet side of the fan. Available with duct or room probes for use in:

- Multifamily structures including apartments, condos, hotels; residential kitchens and bathrooms
- Institutional facilities such as schools, prisons, multistory office buildings; bathrooms

Air Quality, Volatile Organic Compounds (VOC) -

Control a Vari-Green motor via changes in VOCs. VOCs are gasses that are emitted from humans, building materials, perfumes, foods, and furniture off-gassing. Range is 0-2000 CO₂ PPM equivalent.

- Institutional facilities including schools, courthouses, hospital bathrooms, waiting rooms, cafeterias
- Commercial buildings including office space in conference rooms, bathrooms, or breakrooms

Air Quality for Temperature and Humidity - Control the Vari-Green motor via changes in temperature, humidity, or both. Range is 32° to 120°F and 0% to 100% relative humidity.

- Multifamily structures including apartments, condos, hotels, with placement in bathrooms and utility rooms
- Commercial buildings such as office buildings for placement in general office space, conference rooms, utility rooms, and bathrooms

Greenheck's Vari-Green Drive is a factory-mounted, wired, and programmed variable frequency drive. Specifically designed for use in air handling applications, the Vari-Green Drive expands variable volume operation and simplifies speed adjustment to three phase applications.

Features

Vari-Green Drive model VGD-100+ is constructed with a NEMA-4X rated enclosure to ensure a long life operating under outdoor environmental conditions. Every Vari-Green Drive is compatible with all Vari-Green controls or any industry control sending a 0-10V or 4-20mA signal. Model VGD-100+ is also equipped with Modbus/BACnet® communications allowing for seamless integration to building management systems.

	VGD-100+
Analog Input (0-10V, 4-20mA)	✓
Damper Actuator Output (24VDC)	✓
Control Voltage Output (24VDC)	✓
LED Indication Lights (3)	✓
Relay Output (2)	✓
Digital Input - Dry (2)	✓
Digital Input - Voltage (2)	✓
RS-485 (Modbus/BACnet)	✓
Bluetooth/Smart Device Interface	✓
On-Board PID Control	✓
Optional Pressure Transducer	✓

Benefits

- Variable volume control from the factory on larger fan sizes where Vari-Green motors are not available.
- R³ filtering and short leads mitigate harmonics.
- Quick start-up and simplistic commissioning as each drive comes preprogrammed and installed from the factory.
- Eliminate compatibility issues as the motor and drive are factory-matched.
- Induction motors are reliable, efficient and readily available if replacements are needed.

Vari-Green Drive 100+ App

Vari-Green Drive model VGD-100+ features a smartphone companion app available for download from the app store. Manually control and monitor the drive from the app as well as access any advanced programming features. For more information about the companion app and its capabilities, reference the VGD-100+ Quick Start Guide located on greenheck.com and the documentation section of the app.

Roof Curbs

A wide variety of roof curbs are available for mounting the fan to the roof including: vented, flanged, pitched and sound-absorbing.

High Wind and Severe Duty Roof Curbs

GPF/GPFP/GPFR

Approved for high wind applications up to a 75 psf wind-load rating. Constructed of 18-gauge steel, formed and welded sides, and a 5-inch flashing flange. GPF is available up to 42 inches in height. GPFP and GPFR are available up to 24 inches in height.

GPFHL (Heavy Load) -

14-gauge galvanized steel with internal vertical support members and a 5-inch flashing flange. Available up to 24 inches in height.

GPFHD (Heavy-Duty) - 12-gauge galvanized steel with internal vertical support members and a double thick 5-inch flashing flange. Available up to 24 inches in height.

Note: Maximum 24 inch height restriction on all curb models certified for high wind.

For detailed curb information refer to Roof Curbs, Extensions and Equipment Supports catalog.

Mounting details for the roof curb to the roof substrate and the fan to the curb are included with each model G and GB installation manual.

Curb Extensions

Extensions raise the fan discharge above the roof line and provide an accessible mounting location for dampers. Insect screen bases, constructed with a removable fine mesh, are recommended for applications where insect entry must be prevented.

Hinged Curb Cap with Cables (Field Installed)

Mounted to the curb cap, allows entire fan to tilt away from curb for access to wheel and ductwork. Includes restraint cables.

Hinged Base (Factory-Mounted)

Allows for easy maintenance. Hinge and restraining cables are factory-mounted to a subbase attached directly to curb without additional height added.

Curb Seal

Rubber seal between fan and curb to ensure proper sealing when attached to a curb.

Tie-Down Points

Four brackets located on the shroud for securing the fan in high wind applications. Cables and anchors by others.

Speed Controllers for Standard Motors

Available for use with shaded pole and permanent split capacitor (PSC) motors on model G fans. They provide an economical means of system balancing with direct drive fans.

Disconnect Switches

A wide selection of NEMA rated switches are available for positive electrical shutoff and safety including: dust-tight, rainproof, and corrosion-resistant. Switches may be internally or externally mounted.

Dampers

Designed to prevent outside air from entering back into the building when fan is off. Includes gravity and motorized dampers. Damper sizes are shown on each performance data page.

Motor Starters

The fundamental function of a motor starter is to protect the motor from damage that can occur from overheating. With a Greenheck motor starter, you receive the best motor protection available.

Specific model components may include: SmartStart™ technology, physical interface, overload protection, disconnect, magnetic contactor, NEMA-1 or NEMA-3R steel enclosures and pre-engineered easy system integration. For complete information on specific Greenheck motor starter models, refer to greenheck.com, motor starter page.

Birdscreen

Galvanized mesh is standard. Optional aluminum or stainless steel rigid wire are also available.

G and GB models are Listed for electrical (UL/cUL 705) File no. E40001

GB models for Emergency Smoke Control Systems (UL/cUL Listed for 500°F (260°C) for 4 hours and 1,000°F (538°C) for 15 minutes) File no. MH17511

Note: UL/cUL is optional and must be specified.

Coatings

A wide variety of coatings and colors are available. Greenheck coatings and resistance charts can be found in the Performance Coatings Commercial and Industrial Fans catalog and in our Product Application Guide—Performance Coatings for Ventilation Products.

Permatector™ is our standard coating. Typically used for applications that require corrosion resistance in indoor and outdoor environments.

Hi-Pro Polyester is resistant to salt water, chemical fumes and moisture in more corrosive atmospheres. Typically used for applications that require superior chemical resistance, excellent abrasion and outdoor UV protection. This coating exceeds protective qualities of air dried Heresite and air dry phenolic. Customers can choose from seven standard decorative colors or color match any color.

Macropoxy with UV topcoat is a two-coat extreme duty coating system. The base coat of Macropoxy is designed specifically for harsh environments, while the topcoat is used for its chemical and UV resistance. Together this system offers the greatest protection in adverse environments, such as marine or chemical processing applications. Customers can choose from seven standard decorative colors.

General Clean Air (Figure 1)

Models G and GB exhaust fans meet the needs of general clean air applications. Tests were conducted to ensure safe, rugged and reliable fans.

Due to the varying types of airstreams encountered in commercial ventilation, system designers must be aware of national, state, and local codes and guidelines governing these installations. Consult local code authorities before proceeding with any ventilation project.

- When roofing materials extend to the top of the curb, roof curbs should be 1½ inches (¾ inch on each side) less than the unit curb cap to allow for roofing and flashing.
- For recommended duct size, damper size, and roof opening dimensions, refer to the performance data pages (starting on page 15).
- Installation must include a means for inspecting, cleaning and servicing the exhaust fan.

Figure 1

High Wind, Hurricane and Seismic (Figure 2)

- Roofing materials can extend to the top of the curb, roof curbs should be 1 inch (25 mm) total, or ½ inch (13 mm) on each side, less than the unit curb cap to allow for roofing and flashing.

Note: The typical installations shown are recommendations based on national codes. Local authority may supersede these recommendations.

Figure 2

Wheel Rotation

Direction of rotation is very critical. Rotation in the wrong direction will result in excessive horsepower, possible motor burnout, and increased noise levels. Check rotation by energizing the unit momentarily. The rotation should be the same as the rotation decals affixed to the unit and is clockwise when viewed from the top of the unit.

Fan Inlet Connections

To ensure proper fan performance, exercise caution in fan placement and connection to the ventilation system. Obstructions, transitions, poorly designed elbows, improperly selected dampers, etc., can cause reduced performance, excessive noise, and increased mechanical stress. For performance to be as published, the system must provide uniform and stable airflow into the fan.

- A** Provide uniform airflow at fan inlet to ensure optimum performance.
- B** Provide uniform airflow at fan inlet and through the damper to ensure optimum performance.
- C** Dampers must open fully. Use motorized dampers in low airflow applications to reduce losses.
- D** Avoid sharp turns or entrance conditions that cause uneven flow. Use turning vanes in elbows to reduce adverse effects.

Model Number Code

The model number code system is designed to completely identify the fan. The correct code letters must be specified to designate belt or direct drive. The remainder of the model code is determined by the size and performance

GB - 240HP - A - 5 - VG/VGD - 1 - 34 - X			
Configuration	Fan Size	Motor RPM (Direct Drive only)	Curb Cap Size (inches)

MAXIMUM BHP AT A GIVEN RPM = (RPM/2703)³
MAXIMUM RPM = 1725
TIP SPEED (ft/min) = RPM x 2.929
MAXIMUM MOTOR FRAME SIZE = 56

Performance certified is for installation type A: Free inlet, Free outlet. Power rating (BHP) does not include transmission losses. Performance ratings include the effects of a birdscreen. The sound ratings shown are loudness values in hemispherical sones at 5 ft. (1.5 m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels.

 TIP SPEED (ft/min) = RPM x 3.829
 MAXIMUM MOTOR FRAME SIZE = 145T

Performance certified is for installation type A: Free inlet, Free outlet. Power rating (BHP) does not include transmission losses. Performance ratings include the effects of a birdscreen. The sound ratings shown are loudness values in hemispherical sones at 5 ft. (1.5 m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels.

MAXIMUM BHP AT A GIVEN RPM = (RPM/845)³
MAXIMUM RPM = 1240
TIP SPEED (ft/min) = RPM x 6.414
MAXIMUM MOTOR FRAME SIZE = 184T

Performance certified is for installation type A: Free inlet, Free outlet. Power rating (BHP) does not include transmission losses. Performance ratings include the effects of a birdscreen. The sound ratings shown are loudness values in hemispherical sones at 5 ft. (1.5 m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels.

Roof Downblast Exhaust Size-260: GB

MAXIMUM BHP AT A GIVEN RPM = (RPM/202)³
MAXIMUM RPM = 505
TIP SPEED (ft/min) = RPM x 14.137
MAXIMUM MOTOR FRAME SIZE = 256T

Performance certified is for installation type A: Free inlet, Free outlet. Power rating (BHP) does not include transmission losses. Performance ratings include the effects of a birdscreen. The sound ratings shown are loudness values in hemispherical sones at 5 ft. (1.5 m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels.

Quick Delivery and Quick Build Programs

Greenheck's Quick Delivery program provides many options to help you meet your project's schedule. Distribution centers around the world ensure same-day pickup and same-day shipment for orders in by 2 p.m. (CST). Hundreds of custom products can be manufactured through our Quick Build program in just days.

Please refer to the chart shown for model size and availability for QD and QB programs.

Anywhere. Anytime.

Distribution centers are nearby and fully stocked.
