AXIAL FANS
軸流風機

VAF 系列－軸流風機

Series VAF, Axial Fans

Horus Air Moving Co., Ltd. certifies that the VAF axial fans model 560, 710, 1000, and 1250 shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and AMCA Publication 311 and comply with the requirements of the AMCA Certified Ratings Program.

All of the axial fans described herein are licensed to bear the AMCA Seal, and their certified ratings are shown on pages 9 through 16.

和旭機械股份有限公司特此證明，此處所示 VAF-560、VAF-710、VAF-1000、VAF-1250 軸流風機獲得了加蓋AMCA印章的授權。所示額定值係根據AMCA出版物211和AMCA出版物311所進行測試和程序確定，並符合AMCA認證額定值計畫的要求。

此型錄描述的軸流風機都已取得AMCA認證，其認證數據參見第九到十六頁。

配產品概述 Outline of Product

VAF系列為本公司之軸流風機，具有通用性強、效率高、耗能少等特點。氣流方向與安裝方向平行，免除轉接風管的損失。佔地小，風量大，特別適用於安裝空間不足之場所。

Model VAF fan is an axial fan. Some of the features and characteristics of these ventilators are: a wide range of applications, high efficiency, and low power consumption. Since the suction direction and release direction of axial fans are aligned in straight-line to the motion, it can avoid the friction loss by the duct. This type of fans is driven by airflow on blades, thus making it possible to attain maximum air volume in minimum space.

軸流風機系列

Series axial fans

產品結構 Construction of Product

此風機主要由機殼、葉輪及馬達構成。

1. 機殼

機殼可採以鋼板旋壓製作，或採用重結構設計，以優質碳鋼焊接製成。法蘭採一體成型或焊接於兩端之外緣。其他如不銹鋼材質或熱浸鍍鋅鋼板亦可採用。

2. 葉輪

葉輪採用鋁合金壓鑄而成，翼截式葉片設計符合空氣動力的特定形狀，使得效率最高、噪音最低。葉片用夾塊固定在葉盤上，葉盤採用雷射切割一體成型，在最大功率連續運轉時，葉輪具有足夠的剛度。葉輪按ISO1940-1的動平衡精度G2.5等全檢合格。

3. 馬達

採用符合CNS-14400高效率馬達，防護等級IP-54，全密閉鼠籠形，規格符合IEC 34標準。

The major components of the ventilators include the housing, impeller, bearings, shaft and motor.

1. Housing

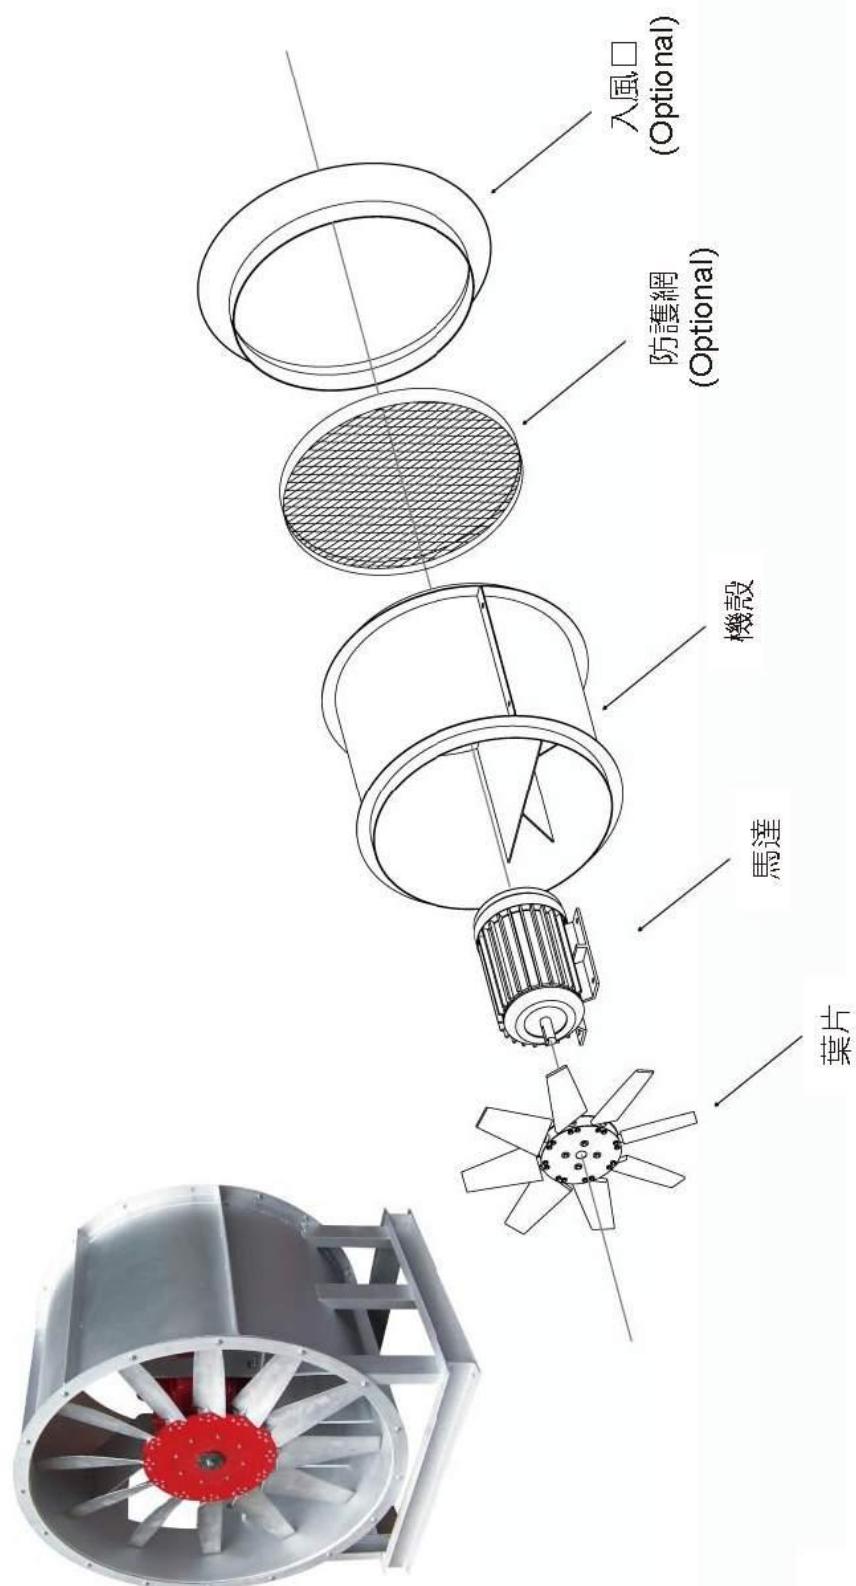

The housing is spun of sheet galvanized steel or welded steel sheet. The flange could be automatic formed or welded by flat or angle rolled steel. In addition, the stainless or hot galvanized steel material is also provided.

2. Impeller

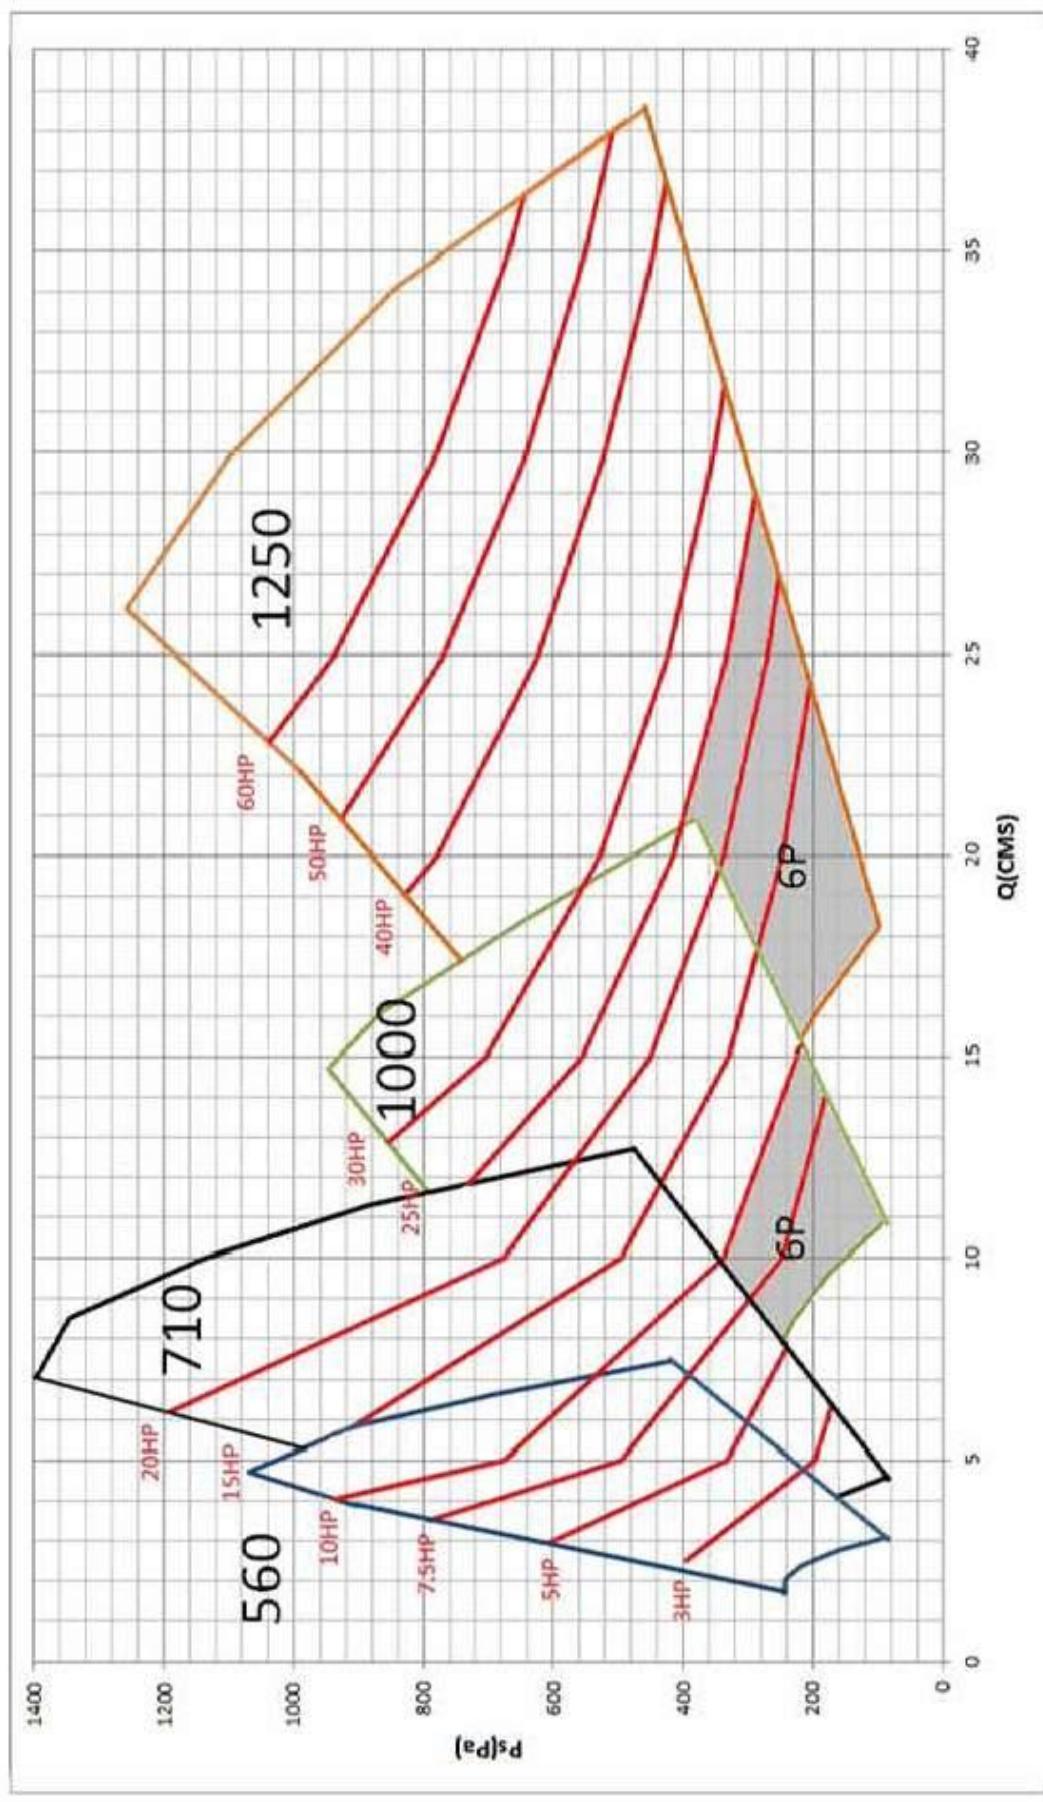

The impeller is made of die- cast aluminum alloy, and airfoil blade design is configured to provide a highly efficient and low noise aerodynamic flow path. The blade is fixed to the hub by holder. The hub is made of laser cutting. The impeller strength is sufficient for it to operate continuously at maximum power. The impellers are balanced before assembly in accordance with ISO1940-1, G2.5 requirement.

3. Motor

Motors have high efficiency design in accordance with CNS-14400 and use as standard closed squirrel cage motors rated to IEC 34. The standard motors have enclosure IP 54 protection.

性能曲線總表 Performance Curve Chart

自由音場 Non-Directional Sound in a Free-Field

聲功率和聲壓之間的最簡單的關係為一個非方向性聲源的自由音場，其關係如下列方程式所示：

The simplest relation between sound power level and sound pressure level is found for a free-field, non-directional sound source, as given by the following equation:

$$L_p = L_{wi} - 20 \log_{10}(r) - k + T$$

L_p = sound pressure level (dB) re 20 μ Pa

L_{wi} = sound power level (dB) re 10¹² watts

r = distance from the source in meters or feet

k = 11.0 dB for metric units and 0.5 dB for English units

T = correction factor for atmospheric pressure and temperature (dB) (since most industrial noise problems are concerned with air at or near standard conditions, T is usually negligible and, therefore, equals 0)

Example:

計算在自由音場中110 dB的聲功率距離聲源10英尺時的聲壓：

Consider a point source having a L_{wi} of 110 dB for a free-field. The sound pressure level at a distance of 10 feet from the source would be calculated as follows (since the source is found for a free-field, the equation for hemispherical radiation from a point source is used) :

$$L_p = L_{wi} - 20 \log_{10}(r) - k$$

therefore :

$$L_p = 110 \text{ dB} - 20 \log_{10}(20) - 0.5 = 89.5 \text{ dB}$$

聲功率計算 Calculating Sound Power Levels

依據ANSI/AMCA 301標準，聲功率與風量、全壓、轉速、直徑其關係如下列所示：

The generalized sound power for each frequency band shall be calculated by the following:

$$LwG = Lw - 50 \log(N/NR) - 70 \log(D/DR)$$

or

The specific sound power for each frequency band shall be calculated by the following:

$$LwK = Lw - 10 \log(Q/QR) - 20 \log(Pt/PtR)$$

D=Impeller diameter

Lw=sound power level (dB) re 10^{-12} watts

Pt=Fan total pressure

N=Fan speed of rotation

Q=Fan airflow rate

R=Reference values

Example:

計算VAF-560-6葉在4P(1750RPM)轉速，靜壓100Pa時之A計權聲功率級dB(A)？

靜壓100Pa，風量3.02CMS操作點之聲功率，由噪音資料中內插獲得：

125Hz時，靜壓100Pa的聲功率值為 $(100-86)/(161-86) = (Lw-92)/(90-92)$

$$Lw(125Hz) = 91.6 \text{ dB}$$

其餘頻帶依此類推，結果如下表所示

Type	Blade Angle	P_s Pa	Q m^3/s	Sound Power Level Lw , dB								LwA dB(A)

The A-weighted sound ratings shown have been calculated per AMCA International Standard 301. Values shown are for inlet L_{wi} and L_{wiA} sound power levels for installation Type B: free inlet, ducted outlet. The sound power level ratings shown are in decibels, referred to 10⁻¹² watts, calculated per AMCA International Standard 301.
