BY JOHNSON CONTROLS

INTRODUCTION

Direct Drive Units

YORK® by Johnson Controls MA-Series replaces foul or contaminated air that is removed by a building's exhaust system.

Such make-up air is so essential that it is part of safety and building code requirements for commercial kitchens, chemical laboratories, electrical control rooms and where gas equipment is installed. Proper make-up air provisions should be part of every building plan.

Without adequate make-up air, air starvation can create negative pressures within a structure. Doors open with difficulty. Dirt, insects, and debris are drawn in through entrances. Fumes and odors accumulate. Pilot lights operate erratically. Moisture is sucked in through cracks in roofs and walls and around windows and doors. Air becomes stale. Backdrafts occur. Air handling systems operate ineffectively, inefficiently, and expensively. Heated or cooled air is wasted when make-up air is not properly considered.

On the other hand, uncontrolled air flow through windows and doors creates drafts; admits moisture, dust, dirt, and pollen; and lets heat escape.

The ability of the MA-Series to regulate air flow assures proper replacement air volume under varying conditions. Units can be coordinated to match the exhaust velocity required to remove fumes, vapors, and grease while providing sufficient oxygen to feed the system effectively.

Belt Drive Units

Larger belt drive models extend the range of the MA-Series. Now clean air volumes above 14,400 CFM can be supplied to replace exhausted air and fumes.

Blowers are efficient, double inlet, forward-curved design in strong, die-formed steel housings. Variable pitch pulley allows adjustment in RPM for more precise regulation of air flow. Motor, belts, pulleys and other components form a dependable, durable and quiet-operating assembly easily balanced to meet system requirements.

MAF Models

The housing's louvered sides permit a direct air path, giving the housing a low profile to the roof. Cleanable, permanent filters back-up each louvered side to prevent airborne contaminants from entering. Filters are easily removed for cleaning.

An integral mounting base permits easy installation on a roof curb. Roof curbs speed, simplify, and coordinate installation of roof-mounted supply and exhaust equipment. YORK® by Johnson Controls offers an extensive variety of curbs for mounting on flat and sloped roofs.

Model MAF

Model MAS

Model: MAF

- Static pressure up to 1.0" wg.
- Direct Drive - Flow capacity up to 3,730 CFM
- Belt Drive - Flow capacity up to 14,426 CFM

Model: MAS (Side Intake)

- Static pressure up to 1.5" wg.
- Belt Drive - Flow capacity up to 12,721 CFM

CERTIFICATIONS & LISTINGS

AMCA Certification

YORK® by Johnson Controls certifies that the MA-Series models shown on pages 4 through 6 (excluding MA6020) are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program.

UL and cUL Certification

MA-Series fans carry the UL label, UL705 (ZACT/ZACT7), file #E477250.

FEATURES & BENEFITS

Easy Installation

The base/curb cap is free of protruding fasteners which would interfere with installation onto the curb.

Easy Maintenance Access

A full-size insulated (MAS model only) cover is easily removed via adjustable heavy duty, quick-release latches (MAS model only), providing clear access to all components. The gasket is installed in the cover, not the housing, so it is not damaged during maintenance.

Structural Integrity

The galvanized housing provides a high degree of rigidity and weather protection by bending and overlapping all seams. Additional angle reinforcement is provided along the interior base, providing stiffness to the walls and support of the unit on the curb. The housing cover is gasketed with thick closed cell neoprene and "pitched" to ensure complete rain run-off.

Motor Selection

Available in a wide range of voltages and enclosures. High quality open drip proof motors are standard. Totally enclosed, explosion proof and two speed motors are available.

Drives and Belts

Pulleys are pre-set to the specified RPM. Cast iron variable pitch pulleys are adjustable, allowing for field balancing based on actual field conditions. All pulleys are sized for at least 150% of the driven horsepower. Motors can be adjusted to maintain proper belt tension.

Conduit Entry

A large 1" dia. hole in the base provides ample room to easily run electrical power into the housing.

Internal Wiring

All direct and belt drive models with ODP motors feature a polarized disconnect plug which is factory wired from the motor to the junction box. This provides a positive method of electric shut-off as required by most codes without requiring the traditional disconnect switch. (See "Safety Disconnect Switch" for optional disconnect devices.)

Vibration Isolators

The blower housing/motor assembly uses multi-directional, rubber-in-shear isolators to mitigate residual vibrations transmission from the unit to the building.

Intake Hood (Model MAS Only)

The intake hood is sloped and properly sized for low velocity, preventing water entry. The 1" aluminum filters are washable and secured by easy to use thumb latches.

Safety Disconnect Switch

Safety disconnect switches are available to allow positive electrical shut-off and safety. Switches are factory mounted when factory wiring is requested. Wiring is only run from the motor to the junction box. (Factory wiring of explosion proof applications is not available.) A wide range of Nema rated enclosures with disconnect switches are available for indoor, outdoor, and explosion proof installations. Disconnects are to be field wired by a licensed electrician.

Speed Controllers

The Lek-Trol™ controller allows adjustment in speed to a maximum of 50% reduction, which results in a very cost effective means for system balancing. The device can be located under the motor cover to prevent unauthorized tampering or on the wall for ease of operation by the building occupants. (Available on direct drive units with ODP motors.)

Firestat Switch

Firestat switch automatically disconnects the unit when the temperature of the air being supplied exceeds a preset rating.

Dampers

Dampers are available for either counter balanced or motorized operation (motor kit optional). Dampers feature square galvanized steel frame, and multi-leaf, roll formed aluminum blades with nylon bearings.

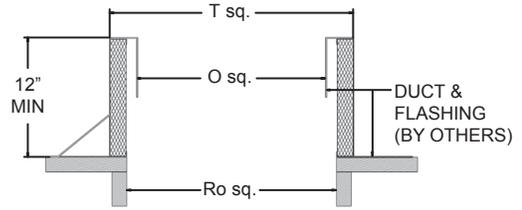

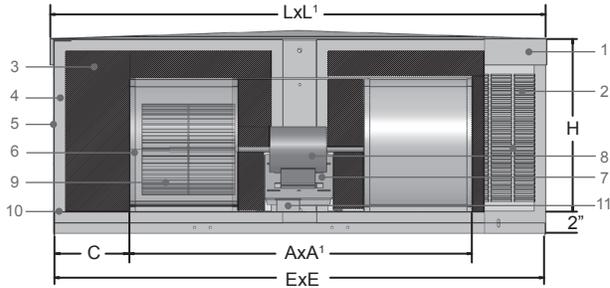

Finishes

Coatings such as Polyester Powder Coat, Epoxy Powder Coat, Phenolic Epoxy Powder Coat, and others are available. See the coatings brochure for details.

Speed (RPM) shown is nominal. Performance is based on actual speed of test. Other speeds listed are obtainable by using matching Lek-Trol™ speed controller. Ratings are based on tests to AMCA Standard 210. Performance shown is for installation type B - free inlet, ducted outlet. All static pressures shown are EXTERNAL. 0" S.P. INCLUDES all fan housing losses including the drop across CLEAN filters. Ratings include the effects of filters in the airstream.

* Outlet Velocity = CFM / .75 Tip Speed = 1.9 x RPM.

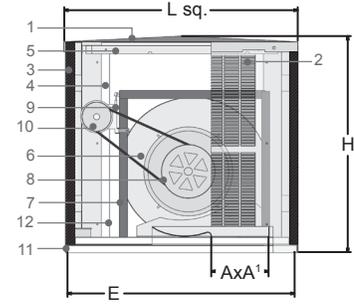

** Outlet Velocity = CFM / .66 Tip Speed = 2.1 x RPM.

*** Outlet Velocity = CFM / .87 Tip Speed = 2.4 x RPM.

ENGINEERING SPECIFICATIONS

MAF - Direct Drive Units

Direct Drive Roof Supply (Intake) fan shall be model MAF, manufactured by YORK® by Johnson Controls. Fan housing shall be low profile, galvanized steel, incorporate die formed louvered side panels and a removable roof cap for access to filters and motor/fan assembly. Removable, permanent, washable filters shall be mounted behind all louvered openings. Fans shall have two forward curved centrifugal wheel assemblies sharing a center mounted motor. Fan motor shall be continuous duty, ball bearing design, permanently lubricated, positively cooled and double shafted. Each fan shall be _cUL_{US} listed.

MAF - Belt Drive Units

Belt Driven Roof Supply (Intake) fan shall be model MAF, manufactured by YORK® by Johnson Controls. Fan housing shall be low profile, galvanized steel, incorporate die formed louvered side panels and a removable roof cap for access to filters and motor/fan assembly. Removable, permanent, washable filters shall be mounted behind all louvered openings. Fans shall have a forward curved centrifugal wheel. Fan motor shall be continuous duty, ball bearing design, permanently lubricated, positively cooled and furnished at the specified voltage, phase and enclosure. Pulleys shall be adjustable, cast iron, machined, keyed, securely attached and sized for 150% of the horsepower at its rated maximum speed. Each fan shall bear the AMCA Licensed Ratings Seal for Air Performance and shall be _cUL_{US} listed.

MAS - Belt Drive Units

Belt driven Roof Filtered Supply (intake) fan shall be model MAS, manufactured by YORK® by Johnson Controls. Fan housing shall be galvanized steel, incorporate an intake hood (extended version optionally available for NFPA96), and a pitched removable housing cover, gasketed and insulated, including quick release latches. Removable, permanent, washable filter(s) shall be mounted on the intake hood opening. Fan shall have a forward curved centrifugal wheel. Fan motor shall be continuous duty, ball bearing design, permanently lubricated, positively cooled and furnished at the specified voltage, phase and enclosure. Pulleys shall be adjustable, cast iron, machined, keyed, securely attached and sized for 150% of the horsepower at its rated maximum speed. Each fan shall be _cUL_{US} listed.
